TABLE 9.—Suspended Matter (Smoke)—Monthly and Seasonal Averages, 1956-7

Average daily or hourly smoke concentrations were determined by the Daily Smoke Filter or the Owens Automatic Filter respectively. Where observations are made with the Daily Smoke Filter, the 'highest daily mean' shown in the table is the highest observed value and is, therefore, the mean value of the smoke concentration on the day concerned. Where observations are made with the Owens Automatic Filter the 'highest daily mean' is the highest of the daily mean smoke concentrations obtained by averaging the hourly readings for each day.

T indicates trace, i.e., less than 0.5 milligrammes per 100 cubic metres.

\* indicates automatic filter.

See note on page 17 on the significance of smoke concentrations.

TABLE 10.—Suspended Matter (Smoke)  
Week-day and Week-end Averages, 1956-7

T indicates trace, i.e. less than 0.5 milligrammes per 100 cubic metres.  
See note on page 17 on the significance of smoke concentrations.

TABLE 11.—Suspended Matter (Smoke)—Hourly Averages, 1956-7

Times are given as local time, which may be either Greenwich Mean Time or British Summer Time, which latter was in force from 22nd April to 7th October. See note on page 17 on the significance of smoke concentrations.

TABLE 12.—Sulphur Dioxide (Volumetric Method)—Monthly and Seasonal Averages, 1956-7

The results in this table are derived from measurements of the mean daily concentrations of sulphur dioxide.

T indicates trace, i.e. less than 0.5 parts per 100 million by volume.

One part of sulphur dioxide per 100 million by volume equals 2.86 milligrammes per 100 cubic metres.

TABLE 13.—Sulphur Dioxide (Volumetric Method)  
Week-day and Week-end Averages, 1956-7

T indicates trace, i.e. less than 0.5 parts per 100 million by volume.  
One part of sulphur dioxide per 100 million by volume equals 2.86 microgrammes per 100 cubic metres.
