1 Introduction

1.1 This document

This document is the Bournemouth Urban Area agglomeration zone (UK0015) updated air quality plan for the achievement of the EU air quality limit values for nitrogen dioxide (NO₂). This is an update to the air quality plan published in September 2011 (<http://uk-air.defra.gov.uk/library/no2ten/>).

This plan presents the following information:

- General information regarding the Bournemouth Urban Area agglomeration zone
- Details of the NO₂ exceedance situation within the Bournemouth Urban Area agglomeration zone
- Details of local air quality measures that have been implemented, will be implemented or are being considered for implementation in this agglomeration zone.

This air quality plan for the Bournemouth Urban Area agglomeration zone should be read in conjunction with the separate UK overview document. The UK overview document sets out, amongst other things, the authorities responsible for delivering air quality improvements and the national measures that are applied in some or all UK zones. The measures presented in this plan and the accompanying UK overview document show how the UK will ensure that compliance with the NO₂ limit values is achieved in the shortest possible time.

1.2 Context

Two NO₂ limit values for the protection of human health have been set in the Air Quality Directive (2008/50/EC). These are:

- The annual mean limit value: an annual mean concentration of no more than 40 $\mu\text{g}\text{m}^{-3}$
- The hourly limit value: no more than 18 exceedances of 200 $\mu\text{g}\text{m}^{-3}$ in a calendar year.

The Air Quality Directive stipulates that compliance with the NO₂ limit values will be achieved by 01/01/2010.

1.3 Zone status

The assessment undertaken for the Bournemouth Urban Area agglomeration zone indicates that the annual limit value was exceeded in 2013 but is likely to be achieved before 2020 through the introduction of measures included in the baseline.

1.4 Plan Structure

General administrative information regarding this agglomeration zone is presented in section 2.

Section 3 then presents the overall picture with respect to NO₂ levels in this agglomeration zone for the 2013 reference year of this air quality plan. This includes declaration of exceedance situations within the agglomeration zone and presentation of a detailed source apportionment for each exceedance situation.

An overview of the measures already taken and to be taken within the agglomeration zone both before and after 2013 is given in section 4.

Baseline modelled projections for 2020, 2025 and 2030 for each exceedance situation are presented in section 5. The baseline projections presented here include, where possible, the impact of measures that have already been taken and measures for which the relevant authority has made a firm commitment to take the measure(s). However, it has not been possible to quantify the impact of all the measures. This section therefore also explains which measures have been quantified, and hence included in the model projections, and which measures have not been quantified.

2 General information about the Zone

2.1 Administrative information

Zone name: Bournemouth Urban Area

Zone code: UK0015

Type of zone: agglomeration zone

Reference year: 2013

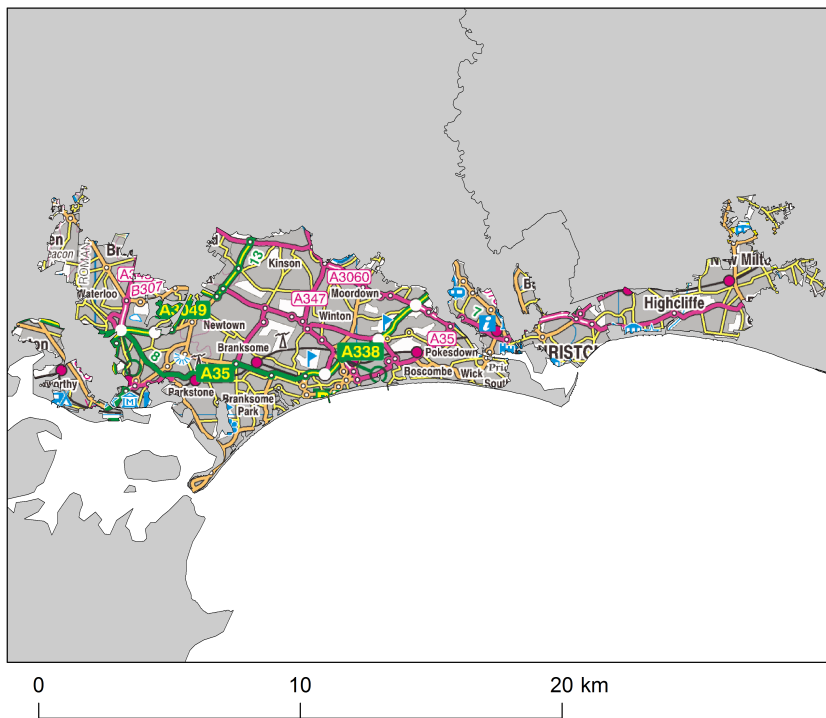

Extent of zone: Figure 1 shows the area covered by the Bournemouth Urban Area agglomeration zone.

Local Authorities within the zone: Figure 2 shows the location of Local Authorities within the agglomeration zone. A list of these Local Authorities is also given below. The numbers in the list correspond to the numbers in Figure 2.

1. Bournemouth Borough Council
2. Christchurch Borough Council
3. East Dorset District Council
4. New Forest District Council
5. Poole Borough Council
6. Purbeck District Council

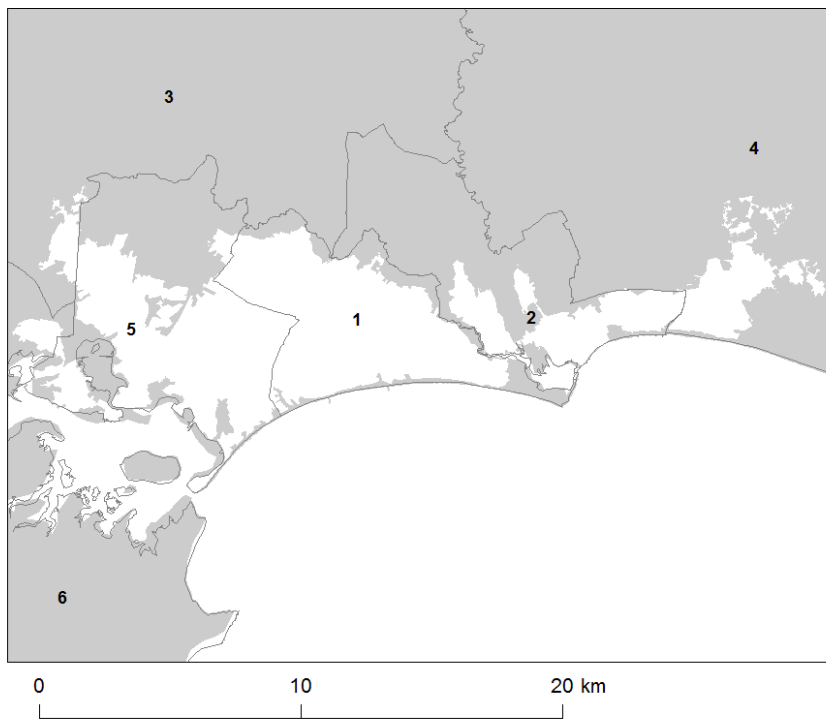

(Note: Local Authority boundaries do not necessarily coincide with zone boundaries. Hence Local Authorities may be listed within more than one zone plan.)

2.2 Assessment details

Measurements

NO₂ measurements in this zone were available in 2013 from the following national network monitoring stations (NO₂ data capture for each station in 2013 shown in brackets):

1. Bournemouth GB0741A (99%)

Full details of monitoring stations within the Bournemouth Urban Area agglomeration zone are available from <http://uk-air.defra.gov.uk/networks/network-info?view=aurm>.

Modelling

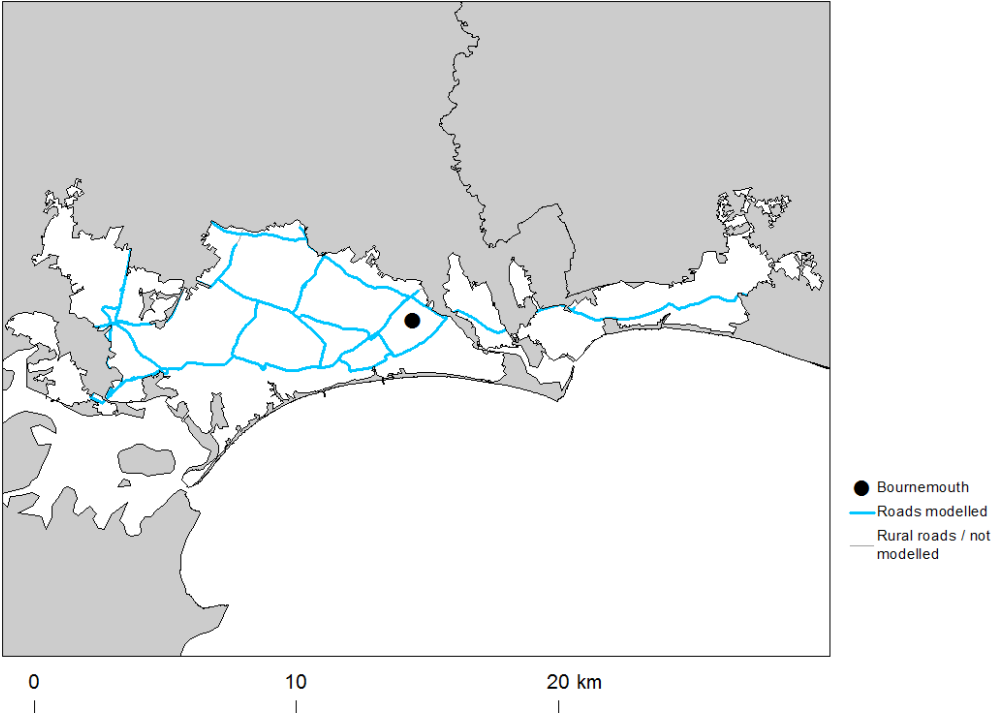

Modelling for the 2013 reference year has been carried out for the whole of the UK. This modelling covers the following extent within this zone:

- Total background area within zone (approx): 121 km²
- Total population within zone (approx): 378,544 people
- Total road length where an assessment of NO₂ concentrations have been made: 71 km in 2013 (and similar lengths in previous years)

Zone maps

Figure 3 presents the location of the NO₂ monitoring stations within this zone for 2013 and the roads for which NO₂ concentrations have been modelled. NO₂ concentrations at background locations have been modelled across the entire zone at a 1 x 1 km² resolution.

Figure 3: Map showing the location of the NO₂ monitoring stations with valid data in 2013 and roads where concentrations have been modelled within the Bournemouth Urban Area (UK0015) agglomeration zone.

2.3 Reporting Under European Directives

From 2001 to 2012 the UK has reported annually on air quality concentrations using a standard excel questionnaire (Decision 2004/461/EC). These questionnaires are available online from <http://cdr.eionet.europa.eu/gb/eu/annualair>. Since 2013 reporting has been via an e-reporting system (Decision 2011/850/EU) <http://cdr.eionet.europa.eu/gb/eu/>.

In addition, the UK has reported on air quality plans and programmes (Decision 2004/224/EC) <http://cdr.eionet.europa.eu/gb/eu/aqpp>.

3 Overall Picture for 2013 Reference Year

3.1 Introduction

There are two limit values for the protection of health for NO₂. These are:

- The annual limit value (annual mean concentration of no more than 40 µgm⁻³)
- The hourly limit value (no more than 18 hourly exceedances of 200 µgm⁻³ in a calendar year)

Within the Bournemouth Urban Area agglomeration zone the annual limit value was exceeded in 2013. Hence, one exceedance situation for this zone has been defined, NO₂_UK0015_Annual_1, which covers exceedances of the annual limit value. This exceedance situation is described below.

3.2 Reference year: NO₂_UK0015_Annual_1

The NO₂_UK0015_Annual_1 exceedance situation covers all exceedances of the annual mean limit value in the Bournemouth Urban Area agglomeration zone in 2013.

Compliance with the annual limit value in this exceedance situation has been assessed using a combination of air quality measurements and modelling. Table 1 presents measured annual concentrations at national network stations in this exceedance situation since the 1st Daughter Directive (1999/30/EC) came into force in 2001. This shows that there were no measured exceedances of the annual limit value in this zone in 2013. Table 2 summarises modelled annual mean NO₂ concentrations in this exceedance situation for the same time period. This table shows that, in 2013, 11.2 km of road length was modelled to exceed the annual limit value. There were no modelled background exceedances of the annual limit value. Maps showing the modelled annual mean NO₂ concentrations for 2013 at background and at roadside locations are presented in Figures 4 and 5 respectively. All modelled exceedances of the annual limit value are coloured orange or red in the maps.

The maximum measured concentration in the zone varies due to changes in emissions and varying meteorology in different years. However, the models are also updated each year to take into account the most up-to-date science, so the modelled results for different years may not be directly comparable.

The modelling carried out for this exceedance situation has also been used to determine the annual mean NO_x source apportionment for all modelled locations. Table 3 presents summary source apportionment information in this exceedance situation.

Table 3 summarises the modelled NO_x source apportionment for the section of road with the highest modelled NO₂ concentration in this exceedance situation in 2013. This is important information because it shows which sources need to be tackled at the location with the largest compliance gap in the exceedance situation. It is

not possible to calculate an unambiguous source apportionment for annual mean NO₂ concentrations for the reasons discussed in the UK Technical Report¹. Therefore no NO₂ source apportionment is provided.

Figure B.1 in Annex B presents the annual mean NO_x source apportionment for each section of road within the NO₂_UK0015_Annual_1 exceedance situation (i.e. the source apportionment for all exceeding roads only) in 2013. Roads have been grouped into motorways, primary roads and trunk roads in this figure.

¹Technical report to be finalised for the final plan.

Table 1: Measured annual mean NO₂ concentrations at national network stations in NO2_UK0015_Annual_1 for 2001 onwards, μgm^{-3} (a). Data capture shown in brackets.

Site name (EOI code)	2001	2002	2003	2004	2005	2006	2007	2008	2009	2010	2011	2012	2013
Bournemouth (GB0741A)	17 (69)	17 (91)	22 (93)	19 (96)	18 (94)	17 (93)	16 (94)	15 (96)	17 (99)	18 (99)	15 (93)	16 (99)	14 (99)

(a) Annual Mean Limit Value = 40 μgm^{-3}

Table 2: Annual mean NO₂ model results in NO2_UK0015_Annual_1 for 2001 onwards.

	2001	2002	2003	2004	2005	2006	2007	2008	2009	2010	2011	2012	2013
Road length exceeding (km)	4.2	0.0	25.5	10.8	10.8	8.5	10.8	12.0	12.0	11.5	10.9	11.2	11.2
Background exceeding (km ²)	0	0	0	0	0	0	0	0	0	0	0	0	0
Maximum modelled concentration (μgm^{-3}) (a)	44.2	39.6	52.3	50.5	48.1	49.9	50.5	51.5	51.1	56.2	55	52	49

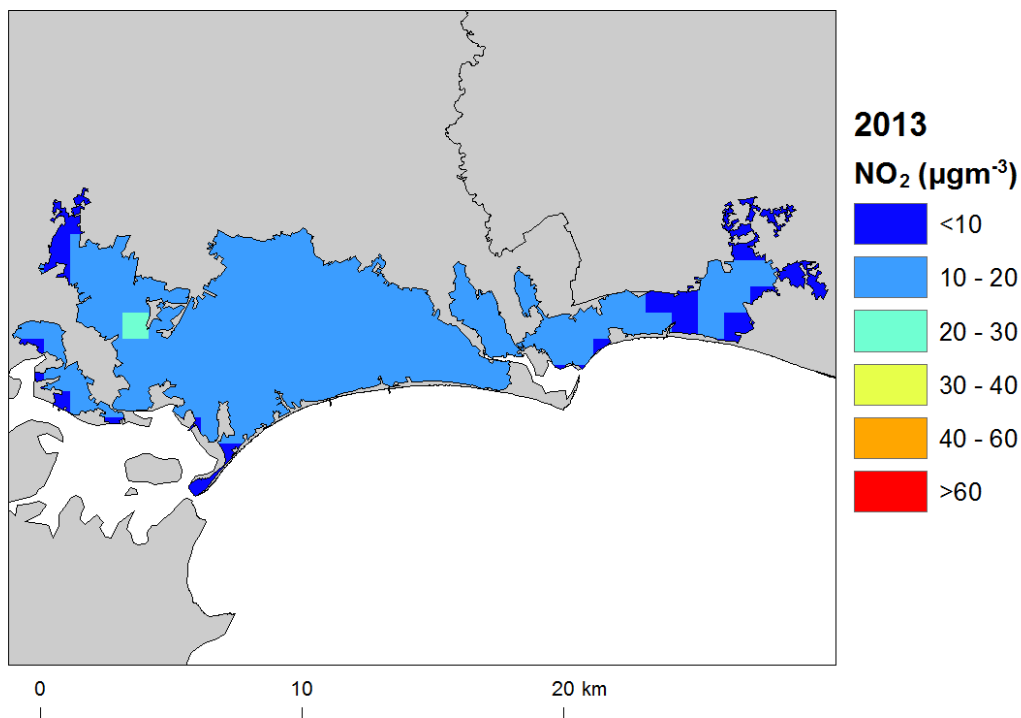

(a) Annual Mean Limit Value = 40 μgm^{-3}

Table 3: Modelled annual mean NOx source apportionment at the traffic count point with the highest modelled concentration in 2013 in NO2_UK0015_Annual_1 (μgm^{-3}) (traffic count point 26967 on the A338; OS grid (m): 411850, 93950).

Spatial scale	Component	Concentration at highest road link (a)
Regional background sources NOx (i.e. contributions from distant sources of > 30 km from the receptor).	Total	7.6
	From within the UK	3.4
	From transboundary sources (includes shipping and other EU member states)	4.2
Urban background sources NOx (i.e. sources located within 0.3 - 30 km from the receptor).	Total	15.6
	From road traffic sources	11.5
	From industry (including heat and power generation)	1.3
	From agriculture	NA
	From commercial/residential sources	1.8
	From shipping	0.0
	From off road mobile machinery	0.7
	From natural sources	NA
	From transboundary sources	NA
From other urban background sources	0.2	
Local sources NOx (i.e. contributions from sources < 0.3 km from the receptor).	Total	96.9
	From petrol cars	12.1
	From diesel cars	41.9
	From HGV rigid	8.9
	From HGV articulated	3.0
	From buses	13.3
	From petrol LGVs	0.3
	From diesel LGVs	17.3
From motorcycles	0.1	
From London taxis	0.0	
Total NOx (i.e. regional background + urban background + local components)		120.2
Total NO ₂ (i.e. regional background + urban background + local components)		49

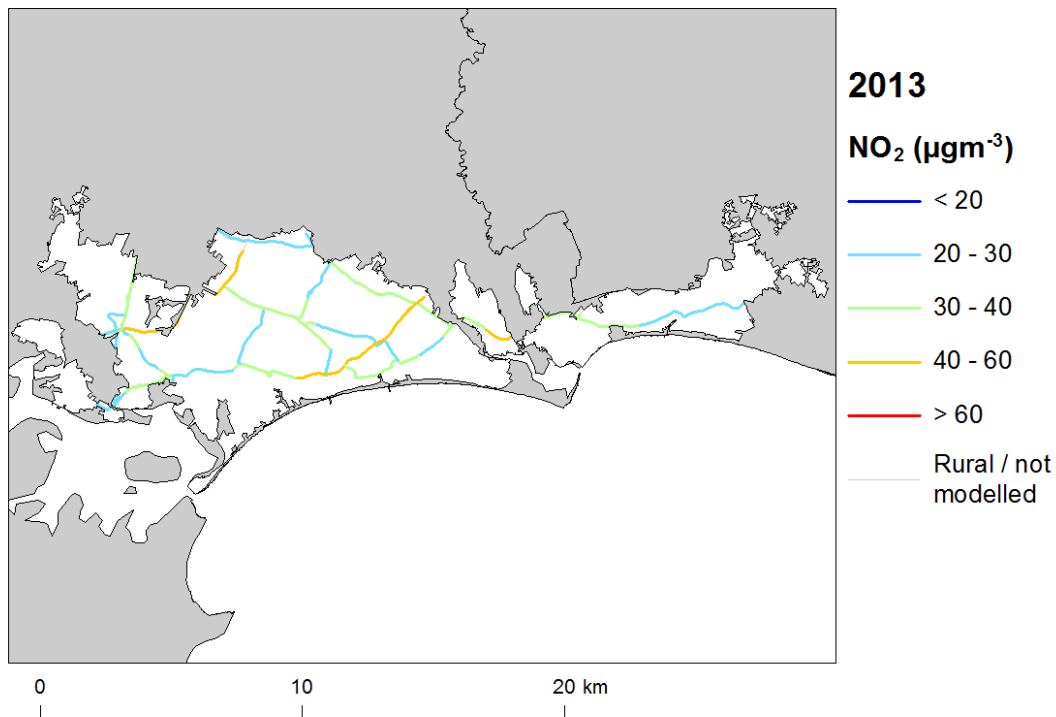

(a) Components are listed with NOx concentration of NA when there is no source from this sector.

4 Measures

4.1 Introduction

This section (section 4) gives details of measures that address exceedances of the NO₂ limit values within Bournemouth Urban Area agglomeration zone. This includes both measures that have already been taken and measures for which there is a firm commitment that they will be taken.

Section 5 then explains the extent to which it has been possible to incorporate the impacts of these measures into the baseline modelling carried out for this assessment.

4.2 Source apportionment

It is important to understand which sources are responsible for causing the exceedance in order to most effectively tailor measures to address the NO₂ exceedance situation described in section 3 above. This can be achieved by considering the source apportionment for the exceedance situation, also presented in section 3. A summary of what the source apportionment shows and the implications for which measures would therefore be appropriate is given here.

Local road traffic was the dominant source in this exceedance location in the reference year. The largest contribution was from cars at the location of maximum exceedance with a contribution of 54.1 $\mu\text{g}\text{m}^{-3}$ of NO_x out of a total of 120.2 $\mu\text{g}\text{m}^{-3}$ of NO_x. Cars, buses, LGVs and rigid HGVs were important sources on the primary roads with the highest concentrations. For all road links concentrations of NO_x from diesel cars were approximately four times greater than NO_x emissions from petrol cars. NO_x concentrations from petrol LGVs are a small component of total NO_x concentrations and less than 2% of total NO_x from LGVs.

This indicates that appropriate measures should impact on local road traffic sources in this zone. Other measures may also be beneficial depending on the source apportionment for the urban background.

4.3 Measures

Measures potentially affecting NO₂ in this agglomeration zone have been taken and/or are planned at a range of administrative levels. These are:

- European Union
- National (i.e. England, Scotland, Wales, Northern Ireland or whole UK)
- Local (i.e. UK Local Authorities)

Details of European Union measures (e.g. euro standards, fuel quality directives, integrated pollution prevention and control) can be found on the European Commission's website (http://ec.europa.eu/environment/air/index_en.htm). Details of national measures are given in the UK overview document.

Relevant Local Authority measures within this exceedance situation are listed in Table C.1 (see Annex C). Table C.1 lists measures which a local authority has carried out or is in the process of carrying out, plus additional measures which the local authority is committed to carrying out or is investigating with the expectation of carrying out in the future.

Overview²

The transport strategy in Bournemouth is centred on promoting sustainable low carbon modes which also bring air quality benefits. The strategy has been developed and adopted in the Local Transport Plan in partnership with neighbouring authorities of the Borough of Poole and Dorset County Council and is evidenced by a large Multi Modal Traffic Model.

This strong partnership working has proved vital in providing improved travel choices and has helped secure additional funding. In 2012 Bournemouth secured £20m for the delivery of sustainable transport schemes.

This has resulted in the delivery of an enhanced programme of schemes to provide enhanced travel choices by making walking, cycling and using public transport easier, safer and more attractive. This being progressed through the provision of a range of infrastructure improvements such as:

- New crossings, accessibility improvements, and other measures to address severance.
- Cycle facilities including the provision of cycle storage facilities at workplaces, schools, universities and on street, and cycle lanes adopting best practice design principles.
- Improvements at bus stops including new shelters providing “next generation” Real Time Passenger Information which also work with mobile devices.
- Bournemouth also work closely with the bus operators, who now run a modern fleet of low emission (Euro 5) buses on all of the main routes. This has contributed to Bournemouth enjoying one of largest bus patronage increases outside London with in excess of 70% growth in last ten years. Public satisfaction is also highest in UK.
- Bournemouth has also recently launched a community car club available for residents and visitors.

Whilst it is difficult to evidence a direct link, an approximate 6% decrease in traffic levels between 2008 and 2014 is considered by the local authority to be due in part to the adopted Transport Policy. The local authority have identified that the modal shares for rail, bus, walking and cycling have gone up appreciably whereas car as driver and taxi have slightly reduced, while passenger in a car/van and powered two wheelers have noticeably reduced. This includes a significant increases in bus patronage, (95% between 2004-05 to 2014-15), and an increase in the numbers cycling to work (47%, between 2001 and 2011).

The programme of capital infrastructure measures in Bournemouth has been complimented by a large programme of revenue funded activities to further encourage sustainable travel use. This has involved working with key partners in the health and education sectors and also with organisations such as British Cycling and Sustrans to deliver a wide programme of initiatives.

Alongside this junction improvements have been taking place to help with travel planning. A key junction along the A338 has been improved with Local Sustainable Transport Funding. Further junction improvements and a shared cycling scheme are under consideration and may provide additional air quality benefits.

An AQMA on Wimborne Road, Bournemouth is not noted on the maps in this plan. Following improvements in air quality in this area the local authority expect to revoke the AQMA in 2015.

4.4 Measures timescales

Timescales for national measures are given in the UK overview document.

Local Authorities report on progress with the implementation of their action plans annually and review action plan measures regularly. Information on local measures was collected in February/March 2015. Hence, any

²This section has been informed by discussions with relevant local authorities and may contain information not presently in Table C.1 Any additional information will be incorporated into the table as part of the finalisation of the plan.

Local Authority action plans and measures adopted by Local Authorities after this time have not been included in this air quality plan.

The reference year for this air quality plan is 2013. Hence where measures started and finished before 2013, then the improvement in air quality resulting from these measures will have already taken place before the reference year and the impact of these measures will have been included in the assessment where the measure has had an impact on the statistics used to compile the emission inventory. Many measures started before the reference year and will continue to have a beneficial impact on air quality well beyond the reference year. Hence measures with a start date before 2013 and an end date after 2013 may have an impact on concentrations in the reference year and a further impact in subsequent years. Where the Status column in Annex C is 'Implementation', this shows that this measure is already underway or that there is a commitment for this measure to go ahead. Where the Status is 'Planning', 'Preparation' or 'Other' the level of commitment is less clear and it is possible some of these measures may not go ahead.

5 Baseline Model projections

5.1 Overview of model projections

Model projections for 2020, 2025 and 2030, starting from the 2013 reference year described in section 3, have been calculated in order to determine when compliance with the NO₂ limit values is likely to be achieved on the basis of EU, regional and local measures currently planned. Details of the methods used for the baseline emissions and projections modelling are provided in the UK technical report.

For national measures, it has not been possible to quantify the impact of all measures on emissions and ambient concentrations. The impact for all quantifiable measures has been included in the baseline projections.

The impacts of the individual Local Authority measures have not been explicitly included in the baseline model projections. However, measures may have been included implicitly if they have influenced the traffic counts for 2012 (used as a basis for the compilation of the emission inventory) or in the traffic activity projections to 2020 and beyond (used to calculate the emissions projections). It should be recognised that these measures will have a beneficial impact on air quality, even if it has not been possible to quantify this impact here.

5.2 Baseline projections: NO₂_UK0015_Annual_1

Table 4 presents summary results for the baseline model projections for 2020, 2025 and 2030 for the NO₂_UK0015_Annual_1 exceedance situation. This shows that the maximum modelled annual mean NO₂ concentration predicted for 2020 in this exceedance situation is 34 $\mu\text{g}\text{m}^{-3}$. Hence, the model results suggest that compliance with the NO₂ annual limit value is likely to be achieved before 2020 under baseline conditions in this exceedance situation.

Figures 6 and 7 show maps of projected annual mean NO₂ concentrations in 2020, 2025 and 2030 for background and roadside locations respectively. Maps for 2013 are also presented here for reference.

It should be noted that the baseline projections presented here include the impacts of some measures, where they can be quantified, that have already been or will be implemented.

Table 4: Annual mean NO₂ model results in NO₂_UK0015_Annual_1.

	2013	2020	2025	2030
Road length exceeding (km)	11.2	0.0	0.0	0.0
Background exceeding (km ²)	0	0	0	0
Maximum modelled concentration NO ₂ (μgm ⁻³) (a)	49	34	27	25
Corresponding modelled concentration NOx (μgm ⁻³) (b)	120	73	55	51

(a) Annual Mean Limit Value = 40 μgm⁻³

(b) NOx is recorded here for comparison with the NOx source apportionment graphs for 2013 presented in Annex B of this plan. Limit values for EU directive purposes are based on NO₂.

Figure 6: Background baseline projections of annual mean NO₂ concentrations in 2020, 2025 and 2030. 2013 is also included here for reference. Modelled exceedances of the annual limit value are shown in orange and red.

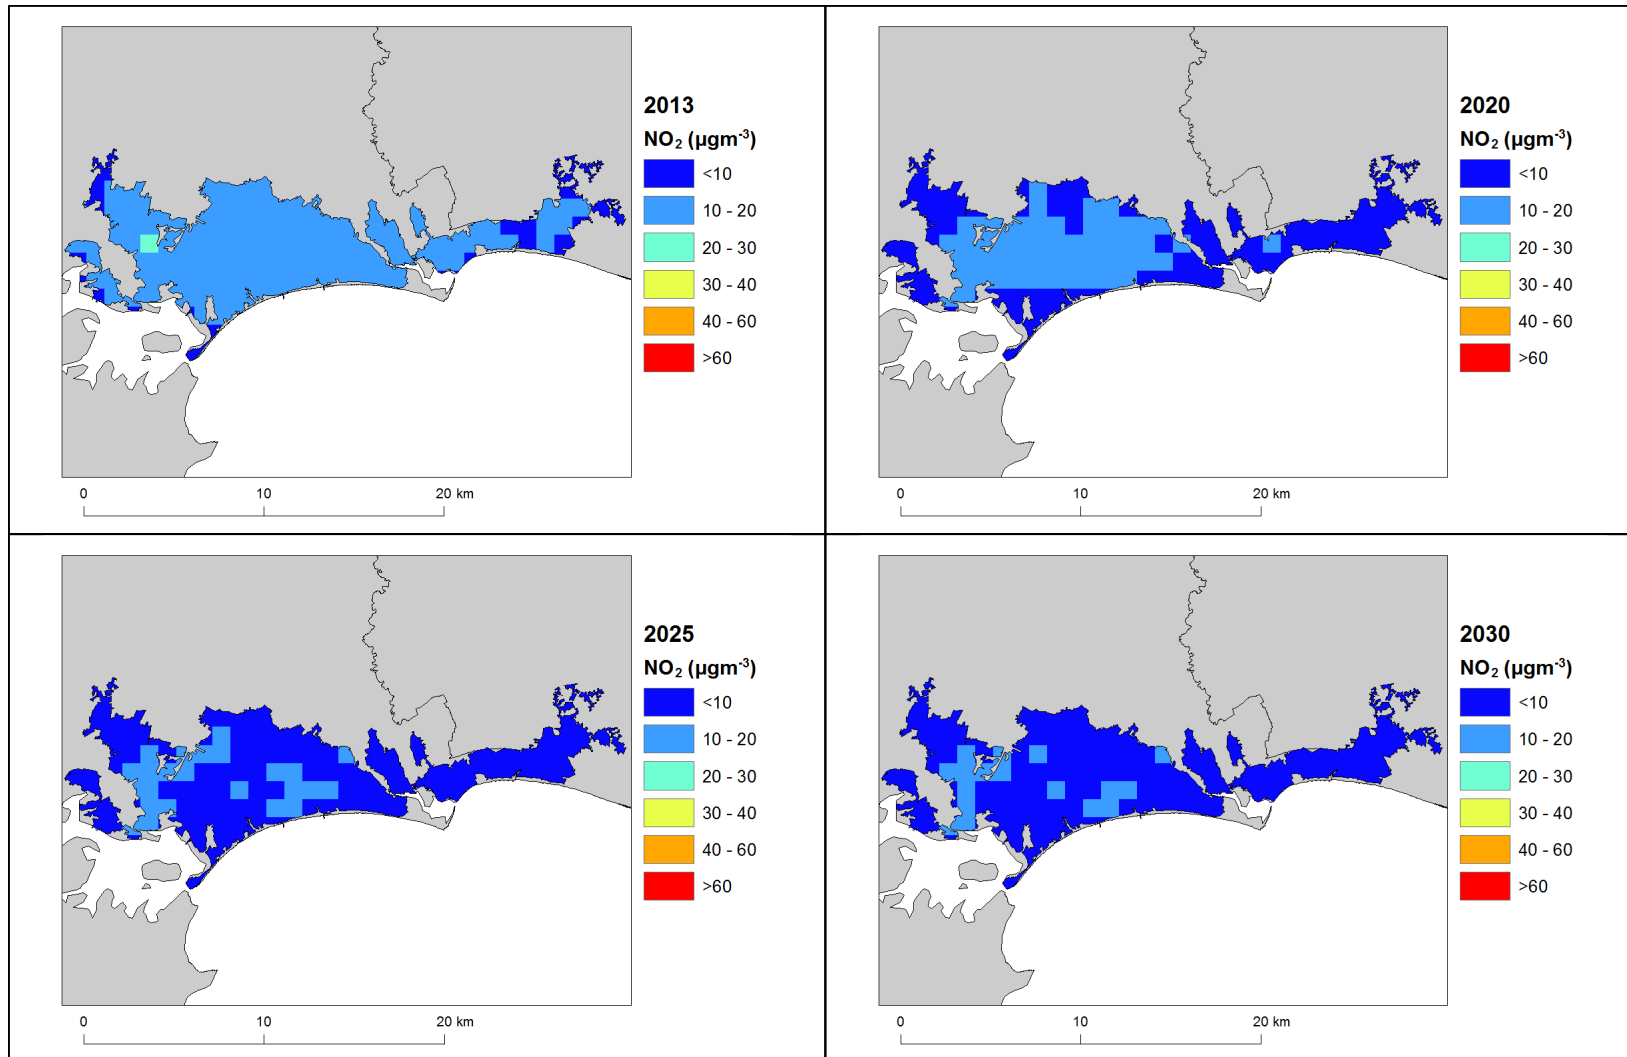

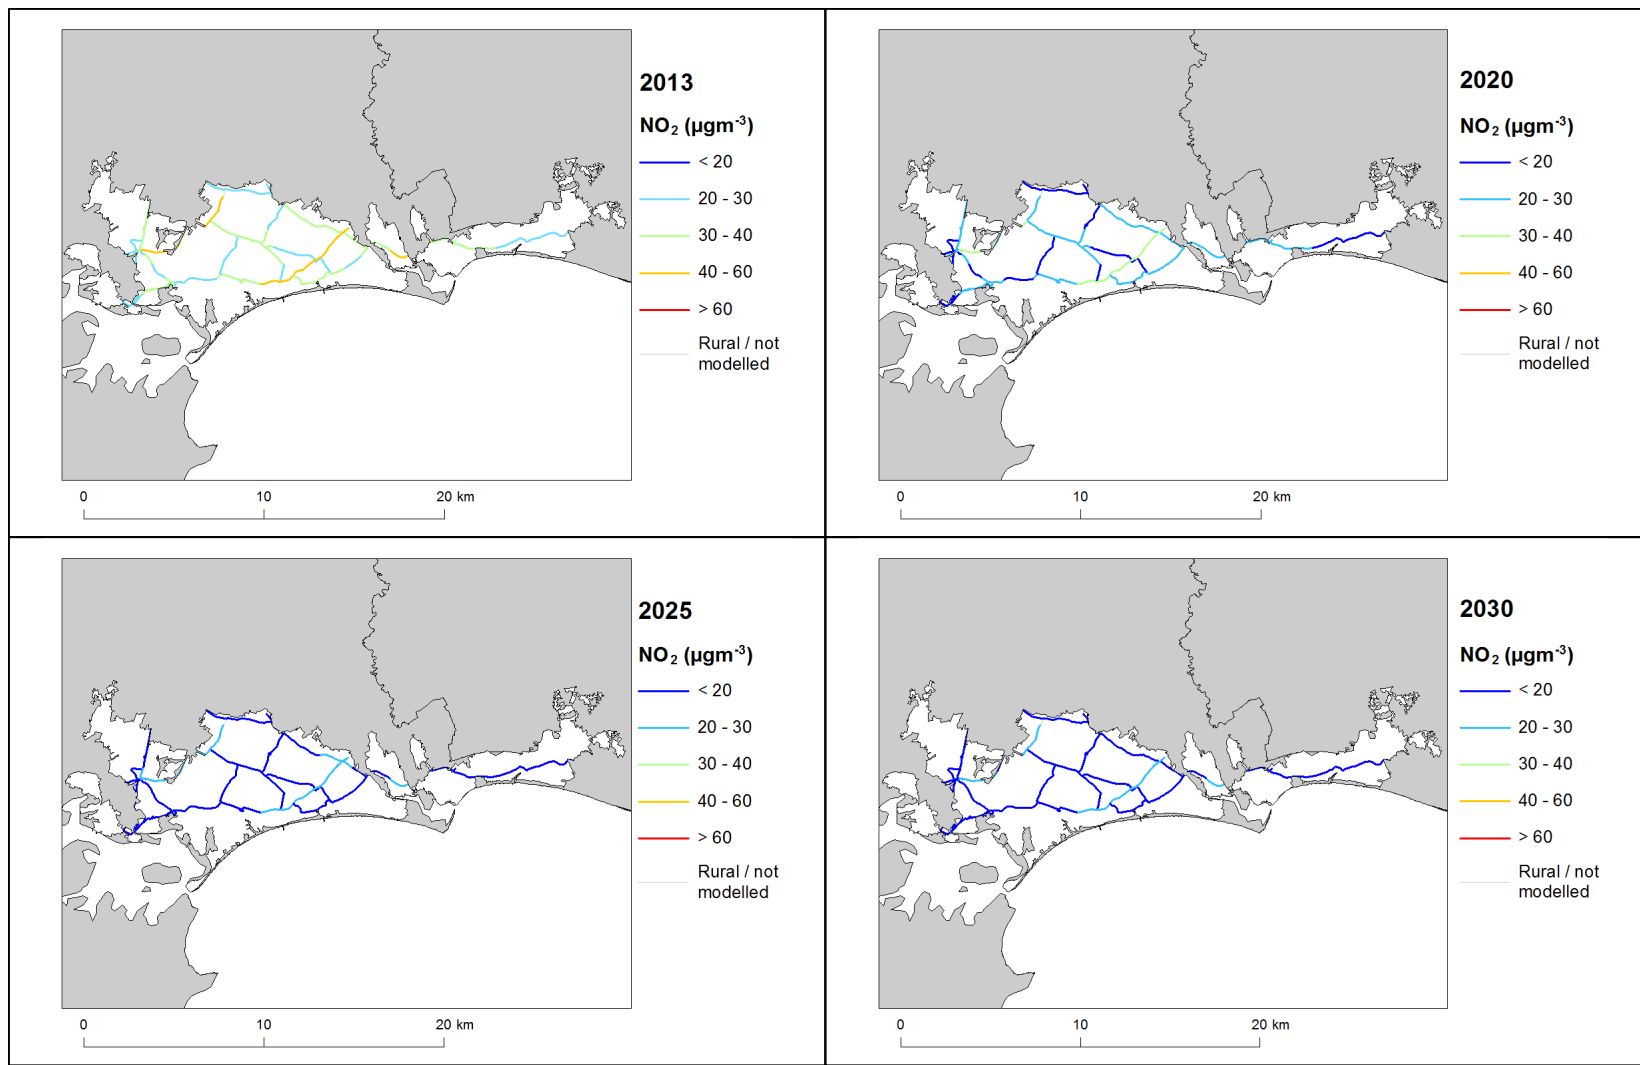

Figure 7: Roadside baseline projections of annual mean NO₂ concentrations in 2020, 2025 and 2030. 2013 is also included here for reference. Modelled exceedances of the annual limit value are shown in orange and red.

Table C.1 Relevant Local Authority measures within Bournemouth Urban Area (UK0015)

Measure code	Description	Focus	Classification	Status	Other information
New Forest District Council_1	Lyndhurst - improvements to A337 and High St. junction	Improve flow of traffic through junction	Traffic planning and management: Other measure	Evaluation	Start date: 2012 Expected end date: 2014 Spatial scale: Local Source affected: Transport Indicator: Traffic surveys to assess traffic movements and monitoring NO2 Target emissions reduction: 3-4 µgm-3
New Forest District Council_2	Lyndhurst - installation of variable messaging system	Reduce traffic travelling through Lyndhurst	Traffic planning and management: Other measure	Evaluation	Start date: 2010 Expected end date: 2011 Spatial scale: Local Source affected: Transport Indicator: Traffic surveys to assess traffic flows and monitoring NO2 Target emissions reduction: 1-2 µgm-3
New Forest District Council_3	Lyndhurst - additional road management schemes	Improve flow of traffic through street canyon	Traffic planning and management: Other measure	Preparation	Start date: 2025 Expected end date: 2028 Spatial scale: Local Source affected: Transport Indicator: Traffic surveys to assess traffic movements and monitoring NO2 Target emissions reduction: 1-5 µgm-3
New Forest District Council_4	Lyndhurst - enforcement of HGV restriction through village	Reduce number of HGV's travelling through Lyndhurst	Traffic planning and management: Freight transport measure	Evaluation	Start date: 2008 Expected end date: 2030 Spatial scale: Local Source affected: Transport Indicator: Traffic surveys to assess no's. of illegal HGV's and monitoring NO2 Target emissions reduction: 1-2 µgm-3
New Forest District Council_5	Lyndhurst - priority bus lane through part of one way system	To reduce time spent by buses queuing in traffic and therefore to encourage public transport use	Traffic planning and management: Encouragement of shift of transport modes	Evaluation	Start date: 2011 Expected end date: 2012 Spatial scale: Local Source affected: Transport Indicator: Traffic surveys to assess bus use Target emissions reduction: <1µgm-3

Measure code	Description	Focus	Classification	Status	Other information
New Forest District Council_6	Lyndhurst - development of school travel plan	Reduce traffic travelling into Lyndhurst High Street	Traffic planning and management: Encouragement of shift of transport modes	Implementation	Start date: 2006 Expected end date: 2020 Spatial scale: Local Source affected: Transport Indicator: Travel surveys of school travel and monitoring NO2 Target emissions reduction: < 1µgm-3
New Forest District Council_7	Lyndhurst - review signage for visitors driving into the village	Ensure vehicles reach their destination quickly	Traffic planning and management: Other measure	Planning	Start date: 2011 Expected end date: 2016 Spatial scale: Local Source affected: Transport Indicator: Visitor surveys Target emissions reduction: < 1µgm-3
New Forest District Council_8	Lyndhurst - enforcement of parking restrictions	Improve traffic through Lyndhurst	Traffic planning and management: Other measure	Implementation	Start date: 2008 Expected end date: 2030 Spatial scale: Local Source affected: Transport Indicator: Enforcement figures and NO2 monitoring Target emissions reduction: < 1µgm-3
New Forest District Council_9	Lyndhurst - review car parking	Assess local parking requirements	Traffic planning and management: Other measure	Implementation	Start date: 2010 Expected end date: 2016 Spatial scale: Local Source affected: Transport Indicator: Travel surveys and monitoring NO2 Target emissions reduction: < 1µgm-3
New Forest District Council_10	Totton - installation and review of static signs	To encourage drivers to turn off their engines whilst waiting at railway barrier	Traffic planning and management: Other measure	Evaluation	Start date: 2009 Expected end date: 2030 Spatial scale: Local Source affected: Transport Indicator: Traffic surveys to assess no. of switched off engines. Monitoring NO2. Target emissions reduction: 2µgm-3

Measure code	Description	Focus	Classification	Status	Other information
New Forest District Council_11	Totton - enforcement of HGV restrictions	Reduce number of unauthorised HGV's travelling through AQMA	Traffic planning and management: Freight transport measure	Implementation	Start date: 2008 Expected end date: 2030 Spatial scale: Local Source affected: Transport Indicator: Travel surveys and monitoring NO2 Target emissions reduction: < 1µgm-3
New Forest District Council_12	Totton - review of local car parking	Reduce journeys through AQMA	Traffic planning and management: Other measure	Implementation	Start date: 2010 Expected end date: 2015 Spatial scale: Local Source affected: Transport Indicator: Car parking surveys Target emissions reduction: < 1µgm-3
New Forest District Council_13	Totton - development of Asda travel plan	Reduce journeys through AQMA	Traffic planning and management: Encouragement of shift of transport modes	Implementation	Start date: 2010 Expected end date: 2015 Spatial scale: Local Source affected: Transport Indicator: Travel surveys and monitoring NO2 Target emissions reduction: < 1µgm-3
New Forest District Council_14	New Forest District Council fleet management	To reduce vehicle emissions including CO2	Other measure: Other measure	Implementation	Start date: 2008 Expected end date: 2030 Spatial scale: Local Source affected: Transport Indicator: Number of staff trained and numbers of replacement vehicles Target emissions reduction: < 1µgm-3
New Forest District Council_15	New Forest District Council fleet management	To reduce vehicle emissions including CO2	Other measure: Other measure	Implementation	Start date: 2008 Expected end date: 2030 Spatial scale: Local Source affected: Transport Indicator: Number of staff trained and numbers of replacement vehicles Target emissions reduction: < 1µgm-3
New Forest District Council_16	Increase public awareness of local air quality	To inform the public enabling them to make choices regarding air quality	Public information and Education: Internet	Implementation	Start date: 2006 Expected end date: 2030 Spatial scale: Local Source affected: Transport Indicator: Public feedback / surveys Target emissions reduction: < 1µgm-3

Measure code	Description	Focus	Classification	Status	Other information
New Forest District Council_17	Support New Forest District Council's Green Transportation Plan	Reduce vehicle use to and from, and whilst at work	Other measure: Other measure	Evaluation	Start date: 2002 Expected end date: 2012 Spatial scale: Local Source affected: Transport Indicator: Staff surveys / prize draw entries for staff not using a car to access work Target emissions reduction: < 1µgm-3
New Forest District Council_18	Review local air quality monitoring	Identify and effectively monitor potential local air quality issues	Other measure: Other measure	Evaluation	Start date: 2006 Expected end date: 2014 Spatial scale: Local Source affected: Industry including heat and power production Indicator: N/A Target emissions reduction: N/A
New Forest District Council_19	Introduction of environmental permitting conditions to reflect air quality objectives and prevent exceedances in the locality of Fawley oil refinery	to prevent a recurrence of a recently revoked AQMA	Permit systems and economic instruments: Other measure	Other	Start date: 2006 Expected end date: 2014 Spatial scale: Local Source affected: Industry including heat and power production Indicator: Local air quality monitoring by LA determined a noted decrease in short term sulphur dioxide concentrations Target emissions reduction: from 63 exceedances of the 15min mean for SO2 in 2005 to < 3 since 2010
New Forest District Council_20	Reinstatement of Waterside Railway (Fawley - Totton)	Reduce local vehicle use	Traffic planning and management: Encouragement of shift of transport modes	Preparation	Start date: 2025 Expected end date: 2030 Spatial scale: Local Source affected: Transport Indicator: n/a at this stage Target emissions reduction: unknown
New Forest District Council_21	Additional lane on A31 (Ringwood) at a congestion point	To reduce congestion	Traffic planning and management: Other measure	Preparation	Start date: 2025 Expected end date: 2030 Spatial scale: National Source affected: Transport Indicator: n/a at this stage Target emissions reduction: unknown

Measure code	Description	Focus	Classification	Status	Other information
New Forest District Council_22	Schemes to improve footpaths / tracks / junctions / crossings in villages and towns across district including Fordingbridge, New Milton, Totton and Bransgore	To promote and encourage walking	Traffic planning and management: Encouragement of shift of transport modes	Implementation	Start date: 2013 Expected end date: 2025 Spatial scale: Local Source affected: Transport Indicator: N/A Target emissions reduction: unknown
New Forest District Council_23	Schemes to improve cycle paths / tracks in villages and towns across district including Fordingbridge, Fawley, Lymington, Ringwood and Marchwood	To promote and encourage cycling	Traffic planning and management: Encouragement of shift of transport modes	Implementation	Start date: 2013 Expected end date: 2025 Spatial scale: Local Source affected: Transport Indicator: N/A Target emissions reduction: unknown
New Forest District Council_24	Schemes to improve public transport infrastructure and community transport in villages and towns across district including the Waterside and Lyndhurst	To promote and encourage use of public transport	Traffic planning and management: Improvement of public transport	Preparation	Start date: 2020 Expected end date: 2025 Spatial scale: Local Source affected: Transport Indicator: N/A Target emissions reduction: unknown
New Forest District Council_25	Specific improvements to road network and pedestrian access in central Totton	To reduce congestion and promote walking	Traffic planning and management: Encouragement of shift of transport modes	Preparation	Start date: 2020 Expected end date: 2025 Spatial scale: Local Source affected: Transport Indicator: N/A Target emissions reduction: unknown
New Forest District Council_26	New Forest Bus Tour - 3 'hop on and off' routes running over 11 weeks throughout the summer connecting tourist attractions, towns and villages throughout district	To reduce the use of private cars	Other measure: Other measure	Evaluation	Start date: 2003 Expected end date: 2004 Spatial scale: Local Source affected: Transport Indicator: number of travellers using scheme Target emissions reduction: 42,000 passenger trips (2014), saving 226,000 private car miles
New Forest District Council_27	Beach bus operating an hourly service between towns, villages, local attractions around the coast and beaches during the school summer holidays	To reduce use of private cars	Other measure: Other measure	Evaluation	Start date: 2013 Expected end date: 2014 Spatial scale: Local Source affected: Transport Indicator: number of travellers using scheme Target emissions reduction: 8,000 passenger trips (2014) saving 58,000 private car miles

Measure code	Description	Focus	Classification	Status	Other information
New Forest District Council_28	New Forest Concierge scheme - 2 seasonal staff deliver information on the New Forest Tour, Beach Bus, walkng and cycling routes for visitors and local residents	To reduce use of private cars and to promote walking and cycling	Other measure: Other measure	Evaluation	Start date: 2013 Expected end date: 2014 Spatial scale: Local Source affected: Transport Indicator: number of people speaking to staff Target emissions reduction: staff spoke to ~4,500 people (2014) offering travel advice
New Forest District Council_30	Lyndhurst - by-pass	Remove some traffic from AQMA	Traffic planning and management: Other measure	Other	Start date: 2008 Expected end date: 2008 Spatial scale: Local Source affected: Transport Indicator: N/A Target emissions reduction: N/A
New Forest District Council_31	Totton - pedestrianisation of road within AQMA	Remove traffic from AQMA	Traffic planning and management: Encouragement of shift of transport modes	Other	Start date: 2008 Expected end date: 2008 Spatial scale: Local Source affected: Transport Indicator: N/A Target emissions reduction: N/A
New Forest District Council_32	Lyndhurst - road improvements on junction of A337 and Romsey Road and on the approach to the junction	Reduce congestion in High Street, Lyndhurst	Traffic planning and management: Other measure	Other	Start date: 2008 Expected end date: 2010 Spatial scale: Local Source affected: Transport Indicator: N/A Target emissions reduction: N/A
New Forest District Council_33	Totton - bridge over railway line	Reduce congestion in AQMA	Traffic planning and management: Other measure	Other	Start date: 2008 Expected end date: 2008 Spatial scale: Local Source affected: Transport Indicator: N/A Target emissions reduction: N/A
New Forest District Council_34	Totton - installation of VMS at railway barrier	Inform motorists on the duration the barrier gates would be closed and to request engines are turned off	Traffic planning and management: Other measure	Other	Start date: 2008 Expected end date: 2010 Spatial scale: Local Source affected: Transport Indicator: N/A Target emissions reduction: N/A
New Forest District Council_35	Totton - junction improvements on the approach to the railway barrier (within AQMA)	Improve congestion	Traffic planning and management: Other measure	Other	Start date: 2008 Expected end date: 2010 Spatial scale: Local Source affected: Transport Indicator: N/A Target emissions reduction: N/A

Measure code	Description	Focus	Classification	Status	Other information
New Forest District Council_36	Vehicle emission testing	Inform motorists with regards to vehicle emissions (take enforcement if appropriate)	Public procurement: Other measure	Other	Start date: 2008 Expected end date: 2010 Spatial scale: Local Source affected: Transport Indicator: N/A Target emissions reduction: N/A
New Forest District Council_37	Investigate use of pollutant absorbing pavement	Reduce pollutant concentrations	Other measure: Other measure	Other	Start date: 2008 Expected end date: 2010 Spatial scale: Local Source affected: Transport Indicator: N/A Target emissions reduction: N/A
Poole Borough Council_CR1	Ashley Cross junction improvements	Banning right hand turns from Commercial Road into Salterns Road/Parr Street for all vehicles except buses. Building wide traffic islands to allow pedestrians to cross while some traffic is running	Traffic planning and management: Other measure	Evaluation	Start date: 2009 Expected end date: 2010 Spatial scale: Local Source affected: Transport Indicator: N/A Target emissions reduction: N/A
Poole Borough Council_CR2	Installation of traffic signals at the junction of Station Road/ Commercial Road	Including a controlled pedestrian crossing on Station Road	Traffic planning and management: Other measure	Evaluation	Start date: 2009 Expected end date: 2010 Spatial scale: Local Source affected: Transport Indicator: N/A Target emissions reduction: N/A
Poole Borough Council_CR3	Commercial Road Loading Ban	Station Road, Commercial Road, Curzon Road, Britannia Road & Parr Street	Traffic planning and management: Other measure	Evaluation	Start date: 2013 Expected end date: 2013 Spatial scale: Local Source affected: Transport Indicator: N/A Target emissions reduction: N/A
Poole Borough Council_CR4	Enforcement of Bus Clearways along the A35 Corridor	N/A	Traffic planning and management: Other measure	Implementation	Start date: 2011 Expected end date: 2015 Spatial scale: Local Source affected: Transport Indicator: N/A Target emissions reduction: N/A
Poole Borough Council_CR5	Link Traffic Signals	At junctions between Station Road and Britannia Road using a UTC system	Traffic planning and management: Other measure	Evaluation	Start date: 2013 Expected end date: 2014 Spatial scale: Local Source affected: Transport Indicator: N/A Target emissions reduction: N/A

Measure code	Description	Focus	Classification	Status	Other information
Poole Borough Council_CR6	Intelligent Transport Systems on A35	Improved co-ordination of signals on 38 signalised junctions to optimise timings and improve bus priority.	Traffic planning and management: Other measure	Evaluation	Start date: 2013 Expected end date: 2015 Spatial scale: Local Source affected: Transport Indicator: N/A Target emissions reduction: N/A
Poole Borough Council_CR7	Travel Planning & Other Smarter Choices	Maximise modal shift with targeted Personalised Travel Planning programme for 60,000 properties in prime corridor. A Corridor Travel Plan Co-ordinator will lead on engagement with local businesses and schools	Traffic planning and management: Encouragement of shift of transport modes	Implementation	Start date: 2014 Expected end date: 2014 Spatial scale: Local Source affected: Transport Indicator: N/A Target emissions reduction: N/A
Poole Borough Council_CR8	Travel Training	A Travel Trainer will train and support people with disabilities to use conventional public transport independently, by recruiting Volunteer Travel Buddies.	Traffic planning and management: Encouragement of shift of transport modes	Implementation	Start date: 2014 Expected end date: 2014 Spatial scale: Local Source affected: Transport Indicator: N/A Target emissions reduction: N/A
Poole Borough Council_CR9	Marketing & Promotion	Publicity campaigns will focus on raising the profile of the corridor and providing information on low carbon travel opportunities	Traffic planning and management: Other measure	Implementation	Start date: 2012 Expected end date: 2015 Spatial scale: Local Source affected: Transport Indicator: N/A Target emissions reduction: N/A
Poole Borough Council_CR10	Business Travel Plans	ESIF Bid: Working with businesses to encourage sustainable travel across Dorset	Traffic planning and management: Encouragement of shift of transport modes	Preparation	Start date: 2016 Expected end date: 2020 Spatial scale: Local Source affected: Transport Indicator: N/A Target emissions reduction: N/A
Poole Borough Council_MR1	Mansfield Road Junction	De-clutter signal equipment & street furniture	Traffic planning and management: Other measure	Evaluation	Start date: 2014 Expected end date: 2014 Spatial scale: Local Source affected: Transport Indicator: N/A Target emissions reduction: N/A
Poole Borough Council_MR2	Mansfield Road Junction	Pedestrian crossing level with the pavement	Traffic planning and management: Encouragement of shift of transport modes	Evaluation	Start date: 2014 Expected end date: 2014 Spatial scale: Local Source affected: Transport Indicator: Improved pedestrian safety Target emissions reduction: N/A

Measure code	Description	Focus	Classification	Status	Other information
Poole Borough Council_MR3	Mansfield Road Junction	Cyclist priority at junction	Traffic planning and management: Encouragement of shift of transport modes	Evaluation	Start date: 2014 Expected end date: 2014 Spatial scale: Local Source affected: Transport Indicator: Improvement linked to cycle safety Target emissions reduction: N/A
Poole Borough Council_MR4	Mansfield Road Junction	Signal timings linked to Richmond Road junction	Traffic planning and management: Other measure	Evaluation	Start date: 2014 Expected end date: 2014 Spatial scale: Local Source affected: Transport Indicator: Linking UTC will allow more free-flowing traffic and reduce stop/start and idling Target emissions reduction: N/A
Poole Borough Council_MR5	Mansfield Road Junction	Changes to loading bays	Traffic planning and management: Encouragement of shift of transport modes	Evaluation	Start date: 2014 Expected end date: 2014 Spatial scale: Local Source affected: Transport Indicator: Will allow more free flowing vehicles thus reducing congestion and improving air quality Target emissions reduction: N/A
Poole Borough Council_MR6	Mansfield Road Junction	Allow all turning movements at junction	Traffic planning and management: Other measure	Evaluation	Start date: 2014 Expected end date: 2014 Spatial scale: Local Source affected: Transport Indicator: N/A Target emissions reduction: N/A
Poole Borough Council_MR7	Mansfield Road Junction	Enhanced quality of materials	Other measure: Other measure	Implementation	Start date: 2014 Expected end date: 2014 Spatial scale: Local Source affected: Transport Indicator: Improvements directed at public realm Target emissions reduction: N/A
Poole Borough Council_RR1	Richmond Road Junction	De-clutter signal equipment & street furniture	Traffic planning and management: Other measure	Evaluation	Start date: 2014 Expected end date: 2014 Spatial scale: Local Source affected: Transport Indicator: N/A Target emissions reduction: N/A

Measure code	Description	Focus	Classification	Status	Other information
Poole Borough Council_RR2	Richmond Road Junction	Pedestrian crossing level with the pavement	Traffic planning and management: Encouragement of shift of transport modes	Evaluation	Start date: 2014 Expected end date: 2014 Spatial scale: Local Source affected: Transport Indicator: Improved pedestrian safety Target emissions reduction: N/A
Poole Borough Council_RR3	Richmond Road Junction	Signal timings linked to Mansfield Road junction	Traffic planning and management: Encouragement of shift of transport modes	Evaluation	Start date: 2014 Expected end date: 2014 Spatial scale: Local Source affected: Transport Indicator: Linking UTC will allow more free-flowing traffic and reduce stop/start and idling Target emissions reduction: N/A
Poole Borough Council_RR4	Richmond Road Junction	Changes to loading bays	Traffic planning and management: Other measure	Evaluation	Start date: 2014 Expected end date: 2014 Spatial scale: Local Source affected: Transport Indicator: Will allow more free flowing vehicles thus reducing congestion and improving air quality Target emissions reduction: N/A
Poole Borough Council_RR5	Richmond Road Junction	Allow all turning movements at junction	Traffic planning and management: Encouragement of shift of transport modes	Evaluation	Start date: 2014 Expected end date: 2014 Spatial scale: Local Source affected: Transport Indicator: N/A Target emissions reduction: N/A
Poole Borough Council_RR6	Richmond Road Junction	Enhanced quality of materials	Other measure: Other measure	Implementation	Start date: 2014 Expected end date: 2014 Spatial scale: Local Source affected: Transport Indicator: Improvements directed at public realm Target emissions reduction: N/A
Poole Borough Council_CA1	Central Area	De-clutter existing street furniture	Traffic planning and management: Other measure	Implementation	Start date: 2014 Expected end date: 2015 Spatial scale: Local Source affected: Transport Indicator: N/A Target emissions reduction: N/A

Measure code	Description	Focus	Classification	Status	Other information
Poole Borough Council_CA2	Central Area	Re-locating signal controlled pedestrian crossing level with the pavement	Traffic planning and management: Encouragement of shift of transport modes	Implementation	Start date: 2014 Expected end date: 2015 Spatial scale: Local Source affected: Transport Indicator: Improved pedestrian safety Target emissions reduction: N/A
Poole Borough Council_CA3	Central Area	Separating on street parking from bus clearways	Traffic planning and management: Encouragement of shift of transport modes	Implementation	Start date: 2014 Expected end date: 2015 Spatial scale: Local Source affected: Transport Indicator: Will allow more free flowing buses Target emissions reduction: N/A
Poole Borough Council_CA4	Central Area	Reducing road width and wider footways	Traffic planning and management: Encouragement of shift of transport modes	Implementation	Start date: 2014 Expected end date: 2015 Spatial scale: Local Source affected: Transport Indicator: Improved pedestrian safety Target emissions reduction: N/A
Poole Borough Council_CA5	Central Area	New island crossing	Traffic planning and management: Encouragement of shift of transport modes	Implementation	Start date: 2014 Expected end date: 2015 Spatial scale: Local Source affected: Transport Indicator: Improved pedestrian safety Target emissions reduction: N/A
Poole Borough Council_CA6	Central Area	Provision of landscaping, e.g. trees	Other measure: Other measure	Implementation	Start date: 2014 Expected end date: 2015 Spatial scale: Local Source affected: Other, please specify Indicator: Public realm but some evidence of pollution sink from tree planting Target emissions reduction: N/A
Poole Borough Council_CA7	Central Area	Possible loss of 6 parking spaces using the TRO process	Traffic planning and management: Encouragement of shift of transport modes	Implementation	Start date: 2014 Expected end date: 2015 Spatial scale: Local Source affected: Transport Indicator: Will allow more free flowing vehicles thus reducing congestion and improving air quality Target emissions reduction: N/A

Measure code	Description	Focus	Classification	Status	Other information
Poole Borough Council_WR1	Weymouth Rd to Mansfield Rd	Minimise the impact of parking and loading bays on through traffic	Traffic planning and management: Encouragement of shift of transport modes	Evaluation	Start date: 2014 Expected end date: 2014 Spatial scale: Local Source affected: Transport Indicator: Will allow more free flowing vehicles thus reducing congestion and improving air quality Target emissions reduction: N/A
Poole Borough Council_WR2	Weymouth Rd to Mansfield Rd	Possible loss of 7 parking spaces using the TRO process	Traffic planning and management: Encouragement of shift of transport modes	Evaluation	Start date: 2014 Expected end date: 2014 Spatial scale: Local Source affected: Transport Indicator: Will allow more free flowing vehicles thus reducing congestion and improving air quality Target emissions reduction: N/A
Poole Borough Council_RA1	Randolph Road Junction	Minimise the impact of parking and loading bays on through traffic	Traffic planning and management: Encouragement of shift of transport modes	Evaluation	Start date: 2014 Expected end date: 2014 Spatial scale: Local Source affected: Transport Indicator: Will allow more free flowing vehicles thus reducing congestion and improving air quality Target emissions reduction: N/A
Poole Borough Council_RA2	Randolph Road Junction	Centre line moved	Traffic planning and management: Encouragement of shift of transport modes	Evaluation	Start date: 2014 Expected end date: 2014 Spatial scale: Local Source affected: Transport Indicator: N/A Target emissions reduction: N/A
Poole Borough Council_RA3	Randolph Road Junction	Cycle lane added on approach to junction	Traffic planning and management: Encouragement of shift of transport modes	Evaluation	Start date: 2014 Expected end date: 2014 Spatial scale: Local Source affected: Transport Indicator: Improved cycle safety Target emissions reduction: N/A
Poole Borough Council_RA4	Randolph Road Junction	Possible loss of 5 parking spaces using the TRO process	Traffic planning and management: Encouragement of shift of transport modes	Evaluation	Start date: 2014 Expected end date: 2014 Spatial scale: Local Source affected: Transport Indicator: Will allow more free flowing vehicles thus reducing congestion and improving air quality Target emissions reduction: N/A

Measure code	Description	Focus	Classification	Status	Other information
Poole Borough Council_ER1	Edward Road Junction	Minimise the impact of parking and loading bays on through traffic	Traffic planning and management: Encouragement of shift of transport modes	Implementation	Start date: 2014 Expected end date: 2015 Spatial scale: Local Source affected: Transport Indicator: Will allow more free flowing vehicles thus reducing congestion and improving air quality Target emissions reduction: N/A
Poole Borough Council_LTP1	Joint Traffic Control Centre	Improved coordination of traffic along A35 Corridor	Traffic planning and management: Other measure	Implementation	Start date: 2014 Expected end date: 2015 Spatial scale: Whole agglomeration Source affected: Transport Indicator: N/A Target emissions reduction: N/A
Poole Borough Council_LTP2	ITSO Smartcards	Quicker entry onto buses reducing time at stops, improving traffic flow and encouraging passengers.	Traffic planning and management: Other measure	Implementation	Start date: 2014 Expected end date: 2015 Spatial scale: Whole town or city Source affected: Transport Indicator: N/A Target emissions reduction: N/A
Poole Borough Council_LTP3	Intelligent Transport Systems	Improved information of traffic flow along the A35 Corridor.	Traffic planning and management: Other measure	Evaluation	Start date: 2014 Expected end date: 2014 Spatial scale: Whole agglomeration Source affected: Transport Indicator: N/A Target emissions reduction: N/A
Poole Borough Council_LTP4	Strategic Cycleway Network	Transfer from car to cycle along the A35 Corridor	Traffic planning and management: Encouragement of shift of transport modes	Implementation	Start date: 2014 Expected end date: 2015 Spatial scale: Whole agglomeration Source affected: Transport Indicator: N/A Target emissions reduction: N/A
Poole Borough Council_LTP5	Urban Traffic Control	Improved control of traffic flow along the A35 Corridor.	Traffic planning and management: Other measure	Implementation	Start date: 2014 Expected end date: 2015 Spatial scale: Whole agglomeration Source affected: Transport Indicator: N/A Target emissions reduction: N/A
Poole Borough Council_LTP6	Local Junction Improvements	Improved traffic flow at critical junctions reducing delays as part of LSTF Project.	Traffic planning and management: Other measure	Implementation	Start date: 2011 Expected end date: 2015 Spatial scale: Local Source affected: Transport Indicator: N/A Target emissions reduction: N/A

Measure code	Description	Focus	Classification	Status	Other information
Poole Borough Council_LTP7	Real Time Information Improvements	Better information for users of Public Transport to encourage its use.	Traffic planning and management: Other measure	Implementation	Start date: 2011 Expected end date: 2015 Spatial scale: Whole town or city Source affected: Transport Indicator: N/A Target emissions reduction: N/A
Poole Borough Council_LTP8	Smarter Choices: Personalised Travel Planning	A better understanding for users of Public Transport options to encourage its use.	Traffic planning and management: Encouragement of shift of transport modes	Implementation	Start date: 2014 Expected end date: 2014 Spatial scale: Whole town or city Source affected: Transport Indicator: N/A Target emissions reduction: N/A
Poole Borough Council_LTP9	Electric Vehicle Charging Points	The promotion of low carbon emission vehicles.	Traffic planning and management: Other measure	Implementation	Start date: 2014 Expected end date: 2015 Spatial scale: Whole agglomeration Source affected: Transport Indicator: N/A Target emissions reduction: N/A
Poole Borough Council_LTP10	Improved Access to Stations	The encouragement to use Rail.	Traffic planning and management: Improvement of public transport	Evaluation	Start date: 2014 Expected end date: 2014 Spatial scale: Local Source affected: Transport Indicator: N/A Target emissions reduction: N/A
Poole Borough Council_LTP11	Safer Routes to School	Encouragement to walk or cycle to school, reducing car use on the strategic network.	Traffic planning and management: Encouragement of shift of transport modes	Planning	Start date: 2014 Expected end date: 2015 Spatial scale: Local Source affected: Transport Indicator: N/A Target emissions reduction: N/A
Poole Borough Council_LTP12	Local Road Safety Schemes	Encouragement to walk or cycle reduce car use.	Traffic planning and management: Other measure	Implementation	Start date: 2014 Expected end date: 2016 Spatial scale: Local Source affected: Transport Indicator: N/A Target emissions reduction: N/A
Poole Borough Council_LTP13	Parking Controls/Enforcement	To improve traffic flow on the A35	Traffic planning and management: Management of parking places	Evaluation	Start date: 2014 Expected end date: 2014 Spatial scale: Local Source affected: Transport Indicator: N/A Target emissions reduction: N/A

Measure code	Description	Focus	Classification	Status	Other information
Poole Borough Council_LSTF	Ashley Road Improvements	To improve traffic flow on the A35 Corridor and take traffic off Commercial Road	Traffic planning and management: Other measure	Implementation	Start date: 2014 Expected end date: 2015 Spatial scale: Local Source affected: Transport Indicator: N/A Target emissions reduction: N/A
