

Figure 26 Rose plot of average PM_{10} concentration, $\mu\text{g m}^{-3}$, from each direction, on all available days in 1992-98. Wind data from London Heathrow; PM_{10} data from London Bloomsbury are TEOM data as recorded (no gravimetric correction factor applied).

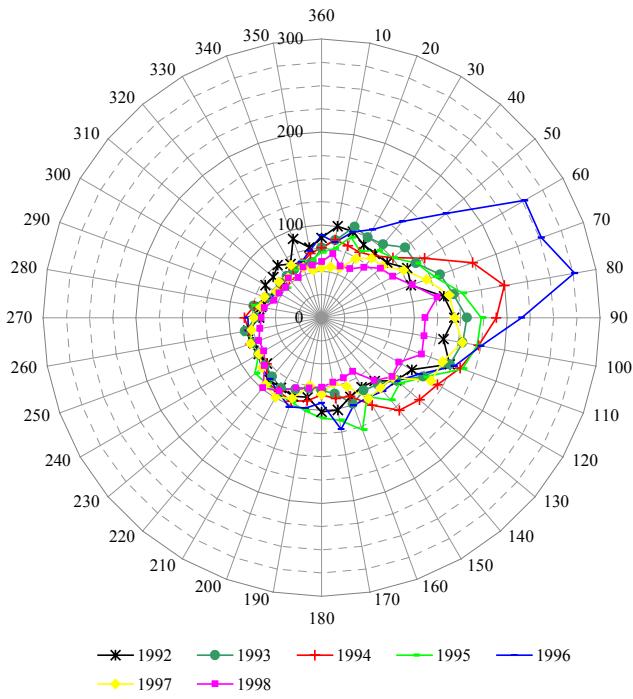

Figure 27 Rose plot of average PM_{10} flux, $\mu\text{g m}^{-2}\text{s}^{-1}$, from each direction, on all available days in 1992-98. Wind data from London Heathrow; PM_{10} data from London Bloomsbury are TEOM data as recorded (no gravimetric correction factor applied). Flux equals wind speed times concentration (Equation 1).

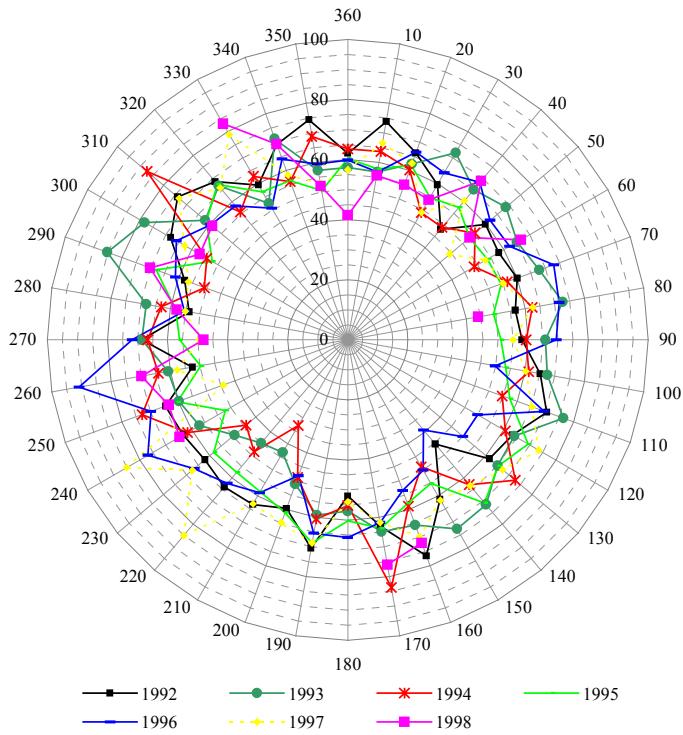

Figure 28 Rose plot of average PM_{10} concentration, $\mu\text{g m}^{-3}$, from each direction, on all exceedence days in 1992-98. Wind data from London Heathrow; PM_{10} data from London Bloomsbury are TEOM data as recorded (no gravimetric correction factor applied).

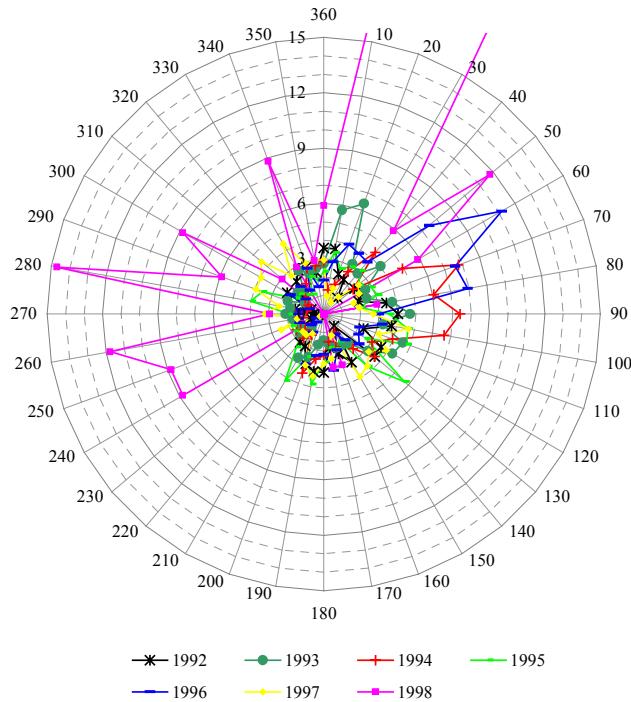

Figure 29 Rose Plot of frequency of wind directions, %, on all exceedence days from 1992-98. Wind data from London Heathrow.

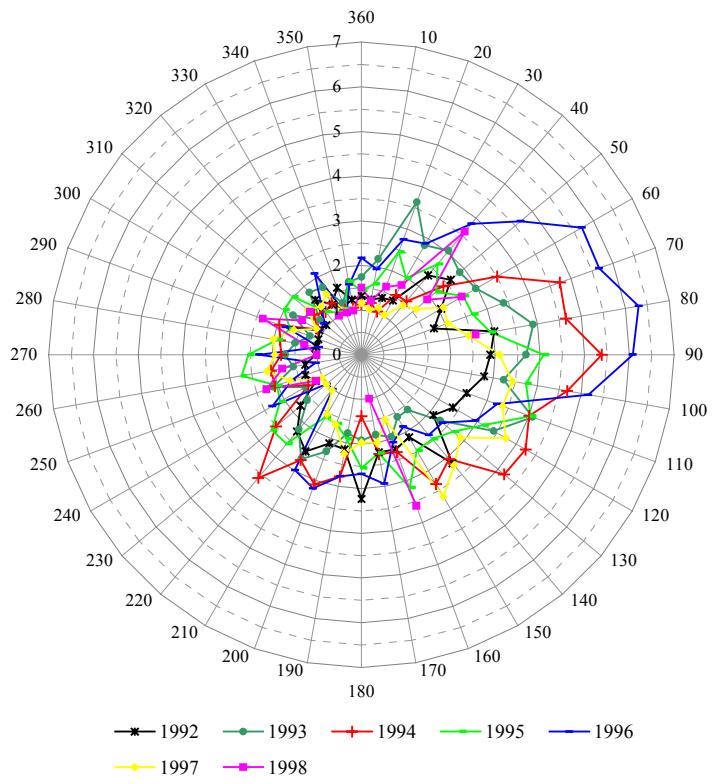

Figure 30 Rose Plot of average wind speed, m s^{-1} , on all exceedence days from 1992-98. Data from London Heathrow.

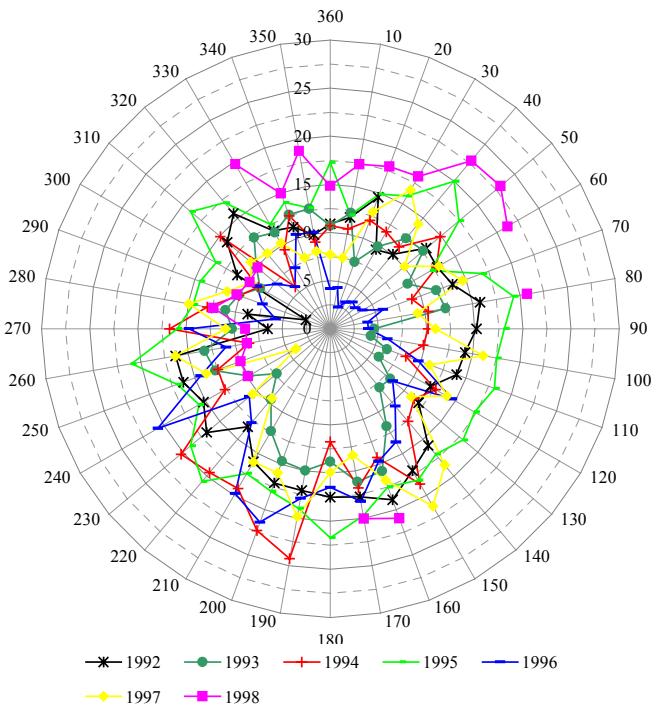

Figure 31 Rose Plot of average temperature, C, on all exceedence days from 1992-98. Data from London Heathrow.

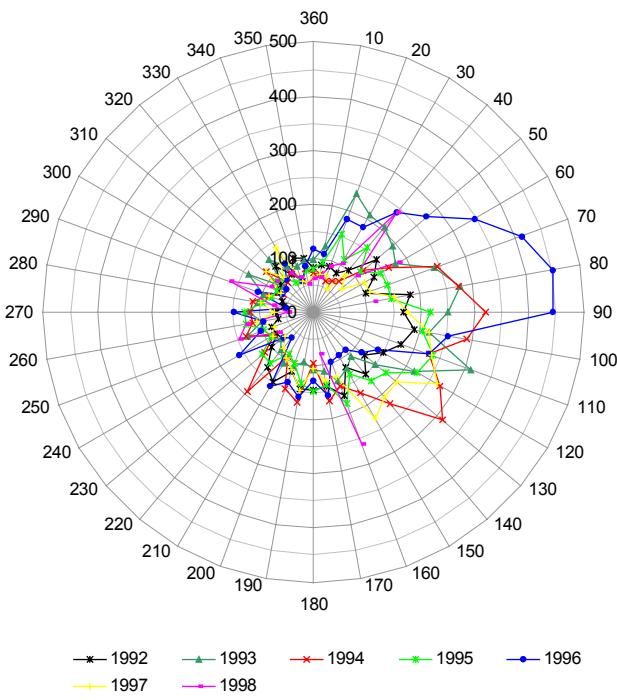

Figure 32 Rose plot of average PM_{10} flux, $\mu\text{g m}^{-2}\text{s}^{-1}$, from each direction, on all exceedence days in 1992-98. Wind data from London Heathrow; PM_{10} data from London Bloomsbury are TEOM data as recorded (no gravimetric correction factor applied). Flux equals wind speed times concentration (Equation 1).
