Executive Summary

The UK is currently required to report air quality data on an annual basis under the following European Directives:

- The Council Directive on ambient air quality and cleaner air for Europe (2008/50/EC).
- The Fourth Daughter Directive (2004/107/EC) under the Air Quality Framework Directive (1996/62/EC).

This document has been prepared to accompany and summarise the UK's 2017 submission on air quality to the European Commission. It presents a summary of the UK's compliance with the above Directives, based upon measurements from national air pollution monitoring networks and air pollution modelling. This includes details of the exceedances reported in 2017.

This document is an extract from a larger report, 'Air Pollution in the UK 2017', which, in addition to the compliance summary, also provides background information on the pollutants covered by these Directives and the UK's own Air Quality Strategy; their sources, effects, how they are measured and modelled in the UK, and details of their spatial distribution and changes over time.

These data are reported on behalf of Defra (the Department for Environment, Food and Rural Affairs) and the Devolved Administrations of Scotland, Wales and Northern Ireland.

For the purposes of air quality monitoring and assessment of compliance with the above Directives, the UK is divided into 43 zones. The 2017 results are detailed in section 3 of this report and summarised below:

- The UK met the limit value for hourly mean nitrogen dioxide (NO₂) in all but two zones.
- Six zones were compliant with the limit value for annual mean NO₂. The remaining 37 zones exceeded this limit value. In 36 of these zones the exceedance of the limit value decreased compared to 2016. Modelling done for the 2017 UK Plan for Tackling Roadside Nitrogen Dioxide Concentrations indicated that improvements in zone compliance would begin to be seen only in 2019 once the time necessary to put measures in place was factored in.
- All non-agglomeration zones complied with the critical level for annual mean NO_X concentration, set for protection of vegetation.
- Three zones exceeded the target value for benzo[a]pyrene.
- All zones met the target values for arsenic, cadmium and nickel.
- All zones met both the target values for ozone; the target value based on the maximum daily eight-hour mean, and the target value based on the AOT40 statistic.

- Nine zones were compliant with the long-term objective for ozone, set for the
 protection of human health. This is based on the maximum daily eight-hour mean.
 The other 34 zones exceeded this long-term objective.
- All zones met the long-term objective for ozone, set for the protection of vegetation. This is based on the AOT40 statistic.
- All zones met the limit value for daily mean concentration of PM₁₀ particulate matter, without the need for subtraction of the contribution from natural sources.
- All zones met the limit value for annual mean concentration of PM₁₀ particulate matter, without the need for subtraction of the contribution from natural sources.
- All zones met both limit values for annual mean concentration of PM_{2.5} particulate matter: the Stage 1 limit value, which came into force on 1st January 2015, and the indicative Stage 2 limit value which must be met by 2020.
- The running year Average Exposure Indicator (AEI) for 2017 was within the 2020 exposure reduction target.
- All zones met the EU limit values for sulphur dioxide, carbon monoxide, lead and benzene.

A summary of the air quality assessment for 2017 with a comparison of the submissions carried out in the previous years (since 2008 when the Air Quality Directive came into force) can be found in Section 4 of this report. Copies of those previous annual submissions can be found on the Commission website:

http://cdr.eionet.europa.eu/gb/eu/annualair and http://cdr.eionet.europa.eu/gb/eu/aqd/.

1 Introduction

A cleaner, healthier environment benefits people and the economy. Clean air is vital for people's health and the environment, essential for making sure our cities are welcoming places for people to live and work now and in the future, and to our prosperity. It is therefore important to monitor levels of air pollution. The UK has domestic, EU and international elements to our legal framework for tackling air pollution. As part of the EU legislation on air quality, all Member States of the European Union (EU) must comply with Directive 2008/50/EC on Ambient Air Quality and Cleaner Air for Europe¹ (referred to as 'the Air Quality Directive') and the Fourth Air Quality Daughter Directive² (2004/107/EC). These Directives require all Member States, including the UK, to undertake air quality assessment, and to report the findings to the European Commission on an annual basis.

The UK has statutory monitoring networks in place to meet the requirements of these Directives, with air quality modelling used to supplement the monitored data. The results must be submitted to the European Commission each year. From 2013 onwards, the air quality compliance assessment has been submitted to the Commission via e-Reporting (a process developed by the European Commission, for reporting of compliance and provision of data). The UK's annual submission for 2017 can be found on the Commission website at http://cdr.eionet.europa.eu/gb/eu/aqd. All the compliance results are reported under 'Information on the Attainment of Environmental Objectives' in e-Reporting Data Flow G. Submissions for years up to and including 2012 (which were in the form of a standard questionnaire) can be found at http://cdr.eionet.europa.eu/gb/eu/annualair.

This document presents an assessment of the UK's compliance with the limit values, target values and long term objectives set out in the Air Quality Directive and the fourth Daughter Directive. It then provides a comparison with previous recent years. This is based upon the data submitted to the European Commission.

Links to the EU Directives on ambient air quality are provided on Defra's web pages at www.defra.gov.uk/environment/quality/air/air-quality/eu/. The Air Quality Directive itself can also be found at http://eur-

<u>lex.europa.eu/LexUriServ/LexUriServ.do?uri=OJ:L:2008:152:0001:0044:EN:PDF</u>, and the fourth Daughter Directive can be found at http://eur-lex.europa.eu/legal-content/EN/ALL/?uri=CELEX:32004L0107.

Further information on air quality in the UK can be found on Defra's online UK Air Information Resource (UK-AIR), at https://uk-air.defra.gov.uk/.

2 Definition of Zones

The UK is divided into 43 zones for air quality assessment. There are 28 agglomeration zones (large urban areas) and 15 non-agglomeration zones. Each zone has an identification code (**Table 2-1**). Zones are shown in **Figure 2-1**.

Table 2-1 UK Zones for Ambient Air Quality Reporting 2017

Zone	Zone code	Zone type
Greater London Urban Area	UK0001	Agglomeration
West Midlands Urban Area	UK0002	Agglomeration
Greater Manchester Urban Area	UK0003	Agglomeration
West Yorkshire Urban Area	UK0004	Agglomeration
Tyneside	UK0005	Agglomeration
Liverpool Urban Area	UK0006	Agglomeration
Sheffield Urban Area	UK0007	Agglomeration
Nottingham Urban Area	UK0008	Agglomeration
Bristol Urban Area	UK0009	Agglomeration
Brighton/Worthing/Littlehampton	UK0010	Agglomeration
Leicester Urban Area	UK0011	Agglomeration
Portsmouth Urban Area	UK0012	Agglomeration

3 Air Quality Assessment for 2017

The air quality assessment for each pollutant is derived from a combination of measured and modelled concentrations. Where both measurements and model results are available the assessment of compliance for each zone is based on the higher concentration of the two.

The air quality compliance assessment is submitted to the European Commission via an e-Reporting system. All the compliance results come under 'Information on the Attainment of Environmental Objectives' in e-Reporting Data Flow G.

The results of the air quality assessment submitted to the European Commission for 2017 are summarised in the tables below. The tables have been completed as follows:

- Where all measurements were within the relevant limit values in 2017, the table shows this as 'OK'.
- In the above cases, where compliance was determined by modelling or supplementary assessment, this is indicated by '(m)' – i.e. 'OK (m)'.
- Where locations were identified as exceeding a limit value, target value or long-term objective, this is identified as '>LV', '>TV' or '>LTO' as applicable.
- Where a non-compliance was determined by modelling or supplementary assessment, this is indicated by (m), as above.
- The abbreviation 'n/a' (not applicable) means that an assessment is not relevant for this zone, such as for the NO_X vegetation critical level in agglomeration zones.
- Zones that complied with the relevant limit values, targets or long-term objectives are shaded blue, while those that did not are shaded red. For ozone, zones that met the relevant target value but not the long-term objective are shaded purple.

There are no longer any zones where margins of tolerance apply.

3.1 Directive 2008/50/EC on Ambient Air Quality and Cleaner Air for Europe

Sulphur dioxide (SO₂): in 2017, all zones and agglomerations within the UK complied with the limit values for 1-hour mean and 24-hour mean SO₂ concentration, set for protection of human health.

All non-agglomeration zones within the UK also complied with the critical levels for annual mean and winter mean SO₂ concentration, set for protection of ecosystems. (These are not applicable to built-up areas).

Carbon monoxide (CO), benzene and lead: all zones and agglomerations were compliant with the limit values for these three pollutants in 2017. The 2017 compliance assessment for CO has been based on objective estimation (explained in Defra's technical report on UK air quality assessment³) underpinned by NAEI emission trends, AURN measurement trends and historical modelling assessments.

Nitrogen dioxide (NO₂): in 2017 not all zones and agglomerations were compliant with the limit values. The results of the air quality assessment for nitrogen dioxide for each zone are summarised in **Table 3-1**.

Two zones had locations where the 1-hour limit value (200 μ g m⁻³) was exceeded on more than the permitted 18 occasions during 2017: Greater London Urban Area (UK0001) and South Wales (UK0041). The remaining 41 zones and agglomerations complied with the 1-hour mean NO₂ limit value.

Six zones *met* the annual mean limit value for NO₂ in 2017:

- Brighton/Worthing/Littlehampton (UK0010)
- Blackpool Urban Area (UK0022)
- Preston Urban Area (UK0023)
- Highland (UK0039)
- Scottish Borders (UK0040)
- Northern Ireland (UK0043).

The remaining 37 zones had locations with measured or modelled annual mean NO_2 concentrations higher than the annual mean limit value (40 μ g m⁻³). In 36 of these zones the maximum measured or modelled annual mean NO_2 concentration decreased compared to 2016.

All non-agglomeration zones within the UK complied with the critical level for annual mean NO_x concentration, set for protection of vegetation.

Particulate Matter as PM₁₀: all zones and agglomerations were compliant with the annual mean limit value of 40 μg m⁻³ for PM₁₀. All zones and agglomerations were compliant with the daily mean limit value. The results of the air quality assessment for PM₁₀ for each zone, with respect to the daily mean and annual mean limit values, are summarised in **Table 3-2**.

Under Section 20 of the Air Quality Directive, Member States are required to inform the Commission where exceedances of PM₁₀ limit values are due to natural sources (for example sea salt), and where this is the case, the exceedance does not count as non-compliance. Particulate matter from sea salt is modelled and has been used in the past to determine whether compliance with the limit values has been achieved after contribution from natural sources has been subtracted. However, in 2017 there were no modelled exceedances of either the 24-hr or annual mean limit values, so no subtraction of contribution from natural sources has been carried out.

Table 3-1 Results of Air Quality Assessment for Nitrogen Dioxide in 2017

Zone	Zone code	NO ₂ LV for health (1hr mean)	NO ₂ LV for health (annual mean)	NO _x critical level for vegetation (ann. mean)

North Wales	UK0042	OK	OK
Northern Ireland	UK0043	OK	OK

In Table 3-4, LV = limit value, (m) indicates that the compliance or exceedance was determined by modelling.

Particulate Matter as PM_{2.5}: all zones met the Stage 1 limit value (25 μ g m⁻³ to be achieved by 1st Jan 2015) which came into force on 1st January 2015, and the Stage 2 indicative limit value (20 μ g m⁻³ to be achieved by 1st Jan 2020). Both limit values apply to the calendar year mean.

The results of the air quality assessment for $PM_{2.5}$ for each zone are summarised in **Table 3-3**. Subtraction of $PM_{2.5}$ contributions due to natural sources was not necessary for any zone.

Under the Air Quality Directive, Member States will be required to achieve a national exposure reduction target for PM_{2.5}, over the period 2010 to 2020. This is based on the Average Exposure Indicator (AEI) statistic. The AEI for the UK is calculated as follows: the arithmetic mean PM_{2.5} concentration at appropriate UK urban background sites only is calculated for three consecutive calendar years, and the mean of these values taken as the AEI.

The AEI for the reference year (2010) was used to determine the National Exposure Reduction Target (NERT), to be achieved by 2020 (see Annex XIV of the Air Quality Directive). The UK's reference year AEI was 13 µg m⁻³; on this basis, the Air Quality Directive sets an exposure reduction target of 15%. This equates to reducing the AEI to 11 µg m⁻³ by 2020. (The detailed methodology and results of this calculation are presented in Defra's technical report on UK air quality assessment, referred to earlier.)

The AEI for the reference year 2015 is set at 20 µg m⁻³ as an Exposure Concentration Obligation (ECO) in the Air Quality Directive. The UK already meets this obligation. There are no obligations or target values for the years *between* 2010, 2015 and 2020, but the running AEIs for these intervening years give an indication of progress towards the 2020 target. The running year AEI for 2017 was calculated as follows:

2015: 10 μg m⁻³
 2016: 10 μg m⁻³
 2017: 10 μg m⁻³

The mean of these three values (to the nearest integer) is 10 μ g m⁻³. Thus, the running AEI for 2017 is below the 2020 exposure reduction target.

HOLUIOTTI ITOIGITU	01100 1 0	OIL	JIV.

Subtraction of natural source contribution was not carried out for any zones in 2017.

LV = limit value, (m) indicates that the compliance or exceedance was determined by modelling.

Ozone: all zones and agglomerations met the target values for health and for protection of vegetation. The results of the air quality assessment for ozone are summarised in **Table 3-4**.

For ozone, there is a target value based on the maximum daily 8-hour mean. All 43 zones and agglomerations were compliant with this target value. There is also a long-term objective for protection of human health, based on the maximum daily 8-hour mean. Nine of the 43 zones and agglomerations were compliant with the long-term objective (LTO) for health in 2017; these were Tyneside, Teesside Urban Area, Glasgow Urban Area, Edinburgh Urban Area, North East, Central Scotland, North East Scotland, Highland and Scotlish Borders. The other 34 zones and agglomerations exceeded this LTO.

There is also a target value based on the AOT40 statistic. The AOT40 statistic (expressed in μg m⁻³.hours) is the sum of the difference between hourly concentrations greater than 80 μg m⁻³ (= 40 ppb) and 80 μg m⁻³ over a given period using only the hourly mean values measured between 08:00 and 20:00 Central European Time each day. All 43 zones and agglomerations met the target value based on the AOT40 statistic. There is also a long-term objective, for protection of vegetation, based on this statistic; all 43 zones and agglomerations also met this long-term objective for vegetation in 2017.

Ozone concentrations – and hence the number of zones exceeding the LTOs - fluctuate from year to year as ozone is a transboundary pollutant and its formation is influenced by meteorological factors.

Footnote to Table 4-5: TV = target value, LTO = long-term objective, (m) indicates that the compliance or exceedance was determined by modelling.

In 2017 there were nine measured exceedances of the ozone population information threshold (at five sites), but no exceedances of the population warning threshold. The information threshold exceedances are detailed in **Table 3-5**. All occurred between 19th and 21st June 2017, in the late afternoon or early evening.

Table 3-5 Measured Exceedances of the Ozone Information Threshold Value in 2017

Site name	Zone code	Number of 1-hour exceedances of information threshold	Maximum 1-hour concentration (μg m ⁻³)
Brighton Preston Park	UK0010	1	184
London North Kensington	UK0001	2	186
Northampton Spring Park	UK0032	4	207
St Osyth	UK0029	1	186
Yarner Wood	UK0030	1	184

Table 3-5 shows the exceedances of the ozone information threshold in the verified dataset. Exceedances for a further two sites were reported at the time based on provisional data.

3.2 Fourth Daughter Directive 2004/107/EC

All zones met target values for arsenic, cadmium and nickel but some zones exceeded the target value for benzo[a]pyrene. The results of the air quality assessment for arsenic (As), cadmium (Cd), nickel (Ni) and benzo[a]pyrene (B[a]P) for each zone are summarised in **Table 3-6**.

Concentrations of B[a]P were above the target value in three zones; Swansea Urban Area, Yorkshire & Humberside, and South Wales. In these three zones, exceedances are attributed to emissions from industrial sources. The remaining 40 zones were compliant with the target value for B[a]P, as shown in **Table 3-6**.

TV = target value, (m) indicates that the compliance or exceedance was determined by modelling.

4 Comparison with Previous Years

This section provides information on non-compliances in previous years from 2008 onwards. (Please note that the format of the tables has changed since last year's report, as there are now too many years' data to fit in the format previously used).

For **SO₂**, **PM_{2.5}**, **lead**, **benzene and CO**, the UK has had **no** non-compliances with Air Quality Directive limit values (apart from the PM_{2.5} Stage 2 indicative limit value) in any year from 2008 (the year the Air Quality Directive came into force) onwards. For information on compliance with the 1st and 2nd Daughter Directives for all pollutants in earlier years, please see the 2012 or earlier reports in this series.

The UK has been compliant with the limit values for both **lead** and **CO** since 2003, and for **benzene** since 2007: these limit values are the same as those contained in the 1st and 2nd Daughter Directives, which the Air Quality Directive superseded.

For oxides of nitrogen, **Table 4-1** summarises the results of the air quality assessment in years from 2008 to 2017. This table shows the numbers of zones exceeding the limit value (plus any agreed margin of tolerance, in cases where a time extension had been granted). The right-hand column contains notes on the effects of any time extensions. As of 1st January 2015, there are no longer any margins of tolerance in force for any pollutant.

All non-agglomeration zones within the UK have complied with the critical level for annual mean NO_x concentration, set for protection of vegetation, in years 2008 onwards.

For PM₁₀, **Table 4-2** summarises the results of the air quality assessment in years from 2008 to 2017. Again, there are notes in the right-hand column explaining the effects of the time extensions which were in place up to the end of 2011 for some zones.

For ozone, **Table 4-3** summarises annual exceedances of the limit value for human health (based on the maximum daily 8-hour mean), the limit value for protection of vegetation (based on the AOT40 statistic), and the two long-term objectives (LTOs) based on these two metrics.

Finally, for the pollutants covered by the Fourth Daughter Directive - arsenic (As), cadmium (Cd), nickel (Ni) and benzo[a]pyrene (B[a]P), **Table 4-4** summarises the numbers of zones with exceedances of target values in previous years.

Table 4-1 Non-Compliances with the Limit Values of the Air Quality Directive for Nitrogen Dioxide, 2008-2017

Year	Zones Exceeding NO ₂ LV for health (1hr mean)	Zones Exceeding NO₂ LV for health (annual mean)	Notes on Time Extensions
2008	3 zones (London, Glasgow, N.E. Scotland)	40 zones	-
2009	2 zones (London, Glasgow)	40 zones	-
2010	3 zones (London, Teesside, Glasgow)	40 zones	-
2011	3 zones (London, Glasgow, South East)	35 zones	A further 5 zones exceeded the annual mean NO ₂ LV in 2011 but were covered by time extensions and within the LV+ Margin of Tolerance (MOT), therefore compliant.
2012	2 zones (London, South East)	34 zones	A further 4 zones exceeded the annual mean NO ₂ LV in 2012 but were covered by time extensions and within the LV+ MOT, therefore compliant.
2013	1 zone (London)	31 zones	A further 7 zones exceeded the annual mean NO ₂ LV in 2013 but were covered by time extensions and within the LV+ MOT, therefore compliant.
2014	2 zones (London, South Wales)	30 zones	A further 8 zones exceeded the annual mean NO ₂ LV in 2014 but were covered by time extensions and within the LV+ MOT, therefore compliant.
2015	2 zones (London, South Wales)	37 zones	2015 was the first year with no time extensions for NO ₂ : this is the reason for the apparent increase in zones exceeding between 2014 and 2015.
2016	2 zones (London, South Wales)	37 zones	No time extensions in place.
2017	2 zones (London, South Wales)	37 zones	No time extensions in place.

Table 4-2 Non-Compliances with the Limit Values of the Air Quality Directive for $PM_{10},\,2008\text{-}2017$

Year	PM₁₀ LV (annual mean)	PM ₁₀ LV (daily mean)	Notes on Time Extensions and Subtraction of Natural contribution
2008	None	2 zones (1 zone after subtraction of natural contribution)	-
2009	None	3 zones (1 zone after subtraction of natural contribution)	-
2010	None	None (after subtraction of natural contribution)	One zone exceeded the daily mean PM ₁₀ limit value more than the permitted 35 times in 2010, after subtraction of natural contribution. This zone was covered by a time extension and was within the LV+MOT so was therefore compliant.
2011	None	None (after subtraction of natural contribution)	One zone exceeded the daily mean PM ₁₀ limit value more than the permitted 35 times in 2011, after subtraction of natural contribution. This zone was covered by a time extension and was within the LV+MOT so was therefore compliant.
2012	None	None (after subtraction of natural contribution. No time extension.)	-
2013	None	None (after subtraction of natural contribution. No time extension.)	-
2014	None	None (after subtraction of natural contribution. No time extension.)	-
2015	None	None (after subtraction of natural contribution. No time extension.)	-
2016	None	None	-
2017	None	None	-

Table 4-3 Exceedances of Air Quality Directive Target Values for Ozone (Health) and Long-Term Objectives, 2008-2017

Year	8-Hour Mean Target Value	AOT40 Target Value	8-Hour Mean LTO	AOT40 LTO
2008	1 zone measured (Eastern)	None	43 zones	41 zones
2009	None	None	39 zones	10 zones
2010	None	None	41 zones	6 zones
2011	None	None	43 zones	3 zones
2012	None	None	41 zones	3 zones
2013	None	None	33 zones	8 zones
2014	None	None	32 zones	3 zones
2015	None	None	43 zones	1 zone
2016	None	None	42 zones	5 zones
2017	None	None	34 zones	None

Table 4-4 Exceedances of 4 $^{\text{th}}$ Daughter Directive Target Values for As, Cd, Ni and B[a]P, 2008-2017

Year	As	Cd	Ni	B[a]P
2008	None	None	2 zones (Swansea, South Wales)	6 zones (Yorkshire & Humberside, Teesside, Northern Ireland, Swansea, South Wales, Belfast)
2009	None	None	2 zones (Swansea, South Wales)	6 zones (Yorkshire & Humberside, Northern Ireland, Teesside, Swansea, North East, South Wales)
2010	None	None	2 zones (Swansea, South Wales)	8 zones, (Yorkshire & Humberside, Northern Ireland, Teesside, Belfast, W Midlands, North East, South Wales, North Wales.)
2011	None	None	2 zones, (Swansea, South Wales)	7 zones (Yorkshire & Humberside, Northern Ireland, Teesside, Swansea, Belfast, North East, South Wales)
2012	None	None	2 zones, (Swansea, South Wales)	8 zones (Yorkshire & Humberside, Teesside, Swansea, Belfast, the North East, South Wales, North Wales, Northern Ireland.)
2013	None	None	2 zones, (Swansea, South Wales)	6 zones (Yorkshire & Humberside, Teesside, Swansea, the East Midlands, the North East, South Wales.)
2014	None	None	3 zones, (Sheffield, Swansea, South Wales)	6 zones (Yorkshire & Humberside, Teesside, Swansea, the East Midlands, the North East and South Wales).
2015	None	None	2 zones, (Swansea, South Wales)	5 zones (Yorks. & Humberside, Teesside, Swansea, the North East and South Wales).
2016	None	None	3 zones, (Sheffield, Swansea, South Wales)	4 zones (Yorks. & Humberside, Swansea, South Wales and Northern Ireland).
2017	None	None	None	3 zones, (Yorks. & Humberside, Swansea and South Wales)
